

FIREWORKS

Future Internet Research and Experimentation

FIRE OVERVIEW

European Testbeds Projects

Serge Fdida

<http://www-rp.lip6.fr/~sf/>

Université Pierre et Marie Curie – Paris 6
Laboratoire LIP6 – CNRS
France

Vision

- *“The Internet only just works”!*
- Explore the possible **Future(s)** of the Internet
 - Realistic view
 - Continuous evolution and change
- The future Internet might be **Polymorphic**
 - Content, Wireless, DTN, ...
 - Many proposals in progress
- How to assess the assumptions and solutions explored by the research projects?
 - Experimentation facility (+ *Network Science*)

FIREWORKS

Testbeds for Future Networks: *a History* behind us in

European Commission
Information Society
and Media

■ Testbed Projects Landscape

- Various technological flavours and focus in the different testbeds
- From infrastructure to services
- Often limited in scope, time and usage
- Sustainability!

■ GEANT

- Network Research Infrastructure for Europe
- Support for e-Science

GEANT2

DANTE

Main questions?

- Building a **Facility**, which affordable long-term vision can we develop?
 - No dogmatism! Usage/Cost Trade-off.
- What is a reasonable **starting point**?
 - Users of the Facility from the origin
- How to study different **transition** scenarios?
- What are the **purposes** to be served?
 - System approach, Multidisciplinary, Societal
- What are the facility-specific **research & industrial** challenges?

FIREWORKS

The Facility as one open shared virtualized resource

The Federation concept

Building FIRE

- Do not start from scratch
 - Too long to make the “utility function” high enough in the short-medium term
 - Initialize with **existing** testbeds
- Enforce the **federation** concept to expect a convergence in the long-term
 - Provide some diversity to cover various needs/communities
 - General and dedicated resources made available
 - Develop **incentives** for research projects (at large) to experiment with their ideas
 - Lower the **entry cost** for experimentation

Facility research challenges

- **Federation**
 - Inter-operability framework
 - Control plane, resource management, incentives
- **Virtualization**
 - Run concurrent experiments, support services
- **Monitoring**
 - Collect data and make them available
- **Legal**
 - Responsibilities and liabilities, IPR, ...
- **Benchmarking**
 - Assessment of the results produced
- **Security**
 - Robust and secure facility
- **Economics**

PII Architecture

Common abstract control framework, which enables the interconnection of diverse testbeds

FEDERICA e-Infrastructure

Research Infrastructure FP7 Project, based on stakeholders on network research: NRENs, DANTE, TERENA, end-users and vendors

Based on a mesh of physical Gigabit Ethernet circuits (from NREN/GEANT) and virtualization technology.

A rough comparison of the FIRE Facility prototypes

			
<ul style="list-style-type: none"> • Context 	<ul style="list-style-type: none"> • Converged Telecom/ Internet Service & Network Environments • Industry focus 	<ul style="list-style-type: none"> • Distributed system • IP networking • Research focus 	<ul style="list-style-type: none"> • Networking Research • Network technology agnostic environment • GÉANT, NRENS
<ul style="list-style-type: none"> • Platform 	<ul style="list-style-type: none"> • SOA • (e.g. to federate IMS based testbeds among themselves and with others) 	<ul style="list-style-type: none"> • PlanetLab – both public and private versions • Own evolution with Federation 	<ul style="list-style-type: none"> • Gigabit transmission equipment and computing nodes both capable of virtualization
<ul style="list-style-type: none"> • Focus 	<ul style="list-style-type: none"> • Converging network, service platform and application infrastructures • Complete Control over Dedicated Resources • Reproducibility 	<ul style="list-style-type: none"> • Shared Resources • Real World Environment <ul style="list-style-type: none"> • Applications enduring over time • Partial Control • Variability 	<ul style="list-style-type: none"> • Virtual slices composed of networking and computing resources • Isolation of experiments in slices • Operational environment • Reproducibility & monitoring

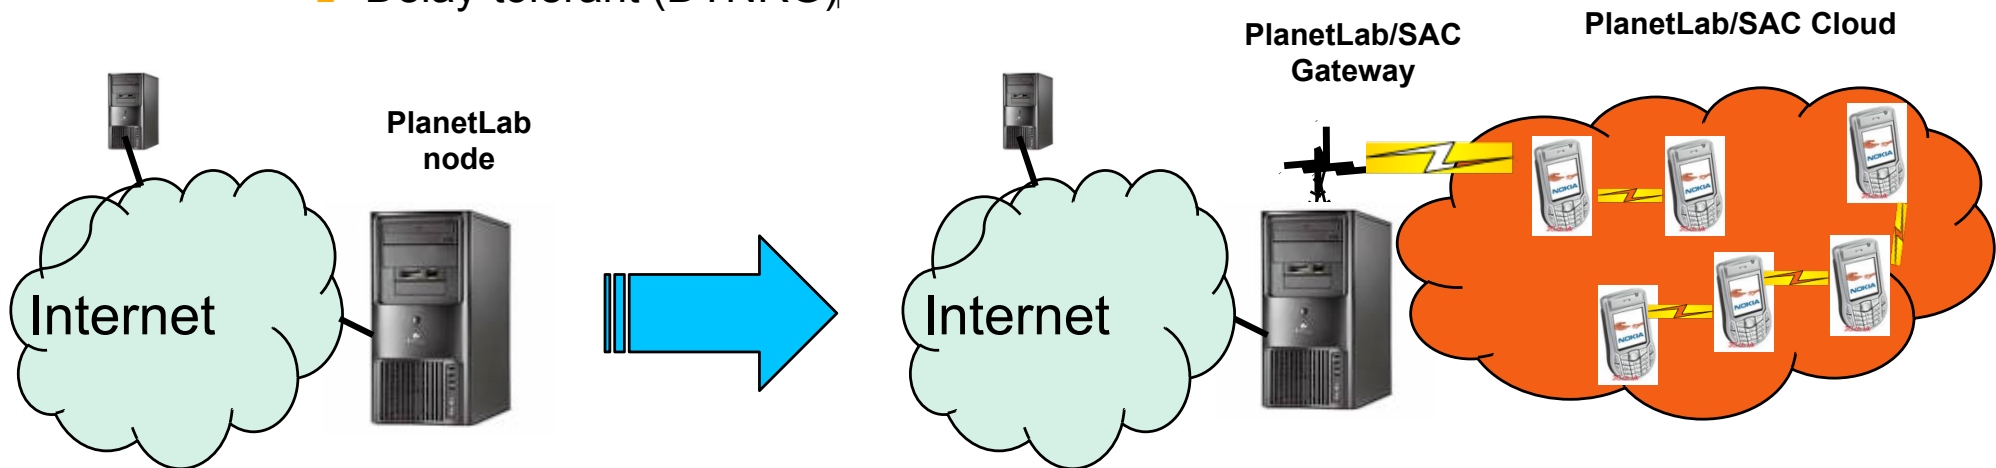

Common Issues

- **Federation**
 - « Peering » Relationships
 - Resource description
 - Resource Management
 - Control planes
- **SLA, Quality assurance of testing activities**
- **Monitoring, Virtualization**
- **Customer support**
- **Gouvernance (inc. Legal, IPR, ...)**

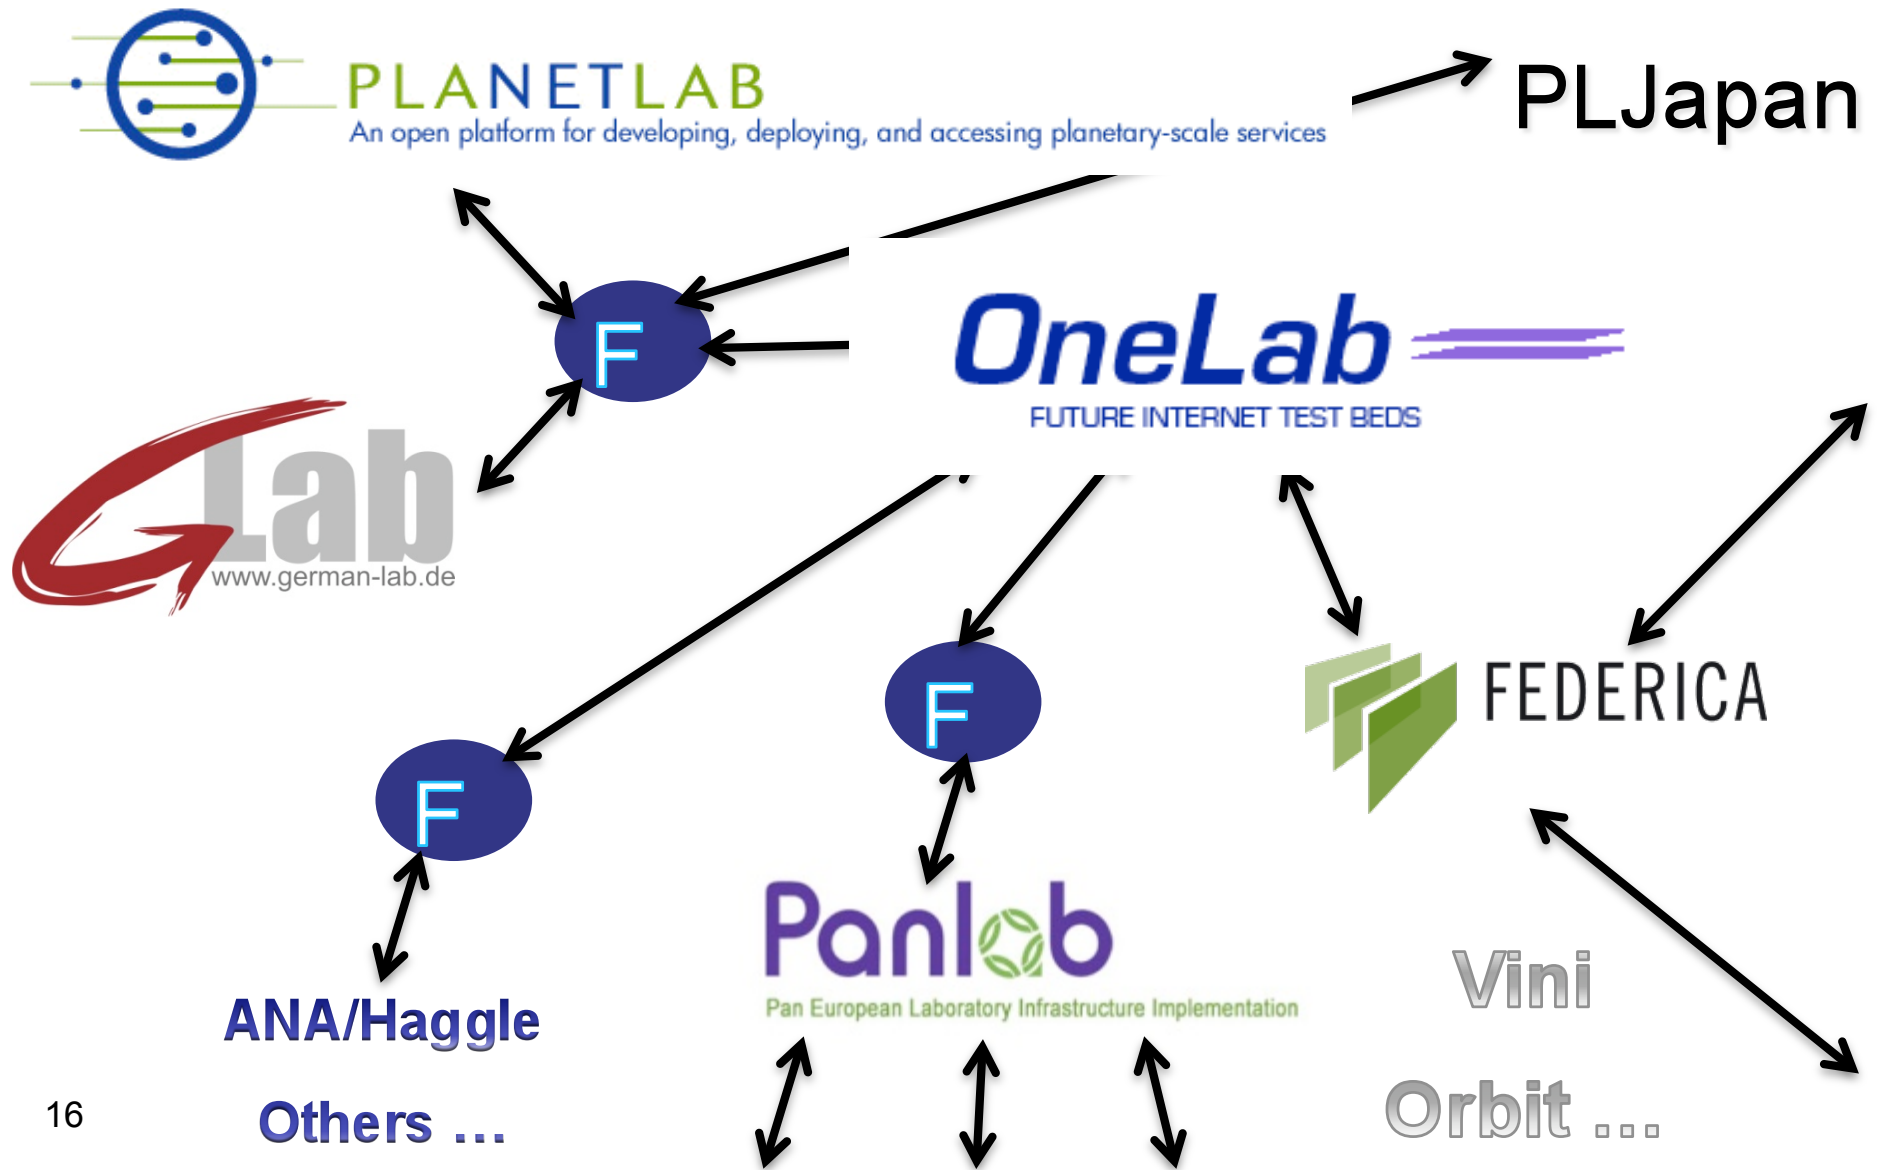

The specific Onelab - SAC Testbed

- **PLE/SAC Gateway**

- Extends PlanetLab nodes to support SAC **clouds** based on Future Internet network paradigms
 - Autonomic Networks (EU FP6 ANA)
 - Opportunistic (Pocket switched networks – EU FP6 Haggle)
 - Delay-tolerant (DTNRG)

Federation & Test-beds

FIREWORKS

Concluding remarks

- **Building a facility is a major challenge**
 - Complex process
 - High risk, non technical issues (IPR, Legal, ...)
 - Should target Industrial & Academic objectives
 - Sustainability
 - Intensive International collaborative effort required

- **FIRE is about:**
 - Two complementary dimensions (NS & Exp)
 - Not a one size fits all
 - Federation concept
 - Based on an ecosystem, Multi-year, EU objective

FIREWORKS

Test-Beds “As close as possible to real life!”

FIREWORKS

"No, you weren't downloaded.
You were born."
