What is SDN-based Peering?

Leveraging SDN to open the doors to new network peering implementations

- Go beyond current capabilities of BGP

- Allow policy specification and control to span operational network domains

  - application-specific policy

  - richer feedback

  - enhanced control

  - faster tuning

  - novel business models

Not looking for a BGP drop in replacement

Focus on targeted use cases

- Application specific peering

- Linking Intra-nets

- Content Delivery

- Bridging hosted cloud with internal cloud services

Created SDX Peering Testbed

SNAP - Southeast Network Access Point

- Hosted by CoLoAtl in Atlanta

- Multi-vendor OpenFlow hardware

- Peering with SoX today

- Will host InstaGENI rack this summer

- Talking to commercial peering partners

- Interested in people with a real problem to solve
