

Experimenter Support: Update

GENI Engineering Conference 17
July 2013

The Number of Experimenters Continues to Grow!

Nearly 1000 experimenters have created over 23K slivers!

Over 100 publications

– List at “GENI Bibliography” on Experimenter Page

Please send us your GENI related publications

Resources for experimenters

GENI is a federated virtual laboratory that provides access to multiple different testbeds to GENI experimenters, enabling networking and distributed systems research. However, the GENI ecosystem, terminology and ling might appear to be overwhelming to a new GENI user. Don't worry, we are here to help! These are some useful pointers that will help you navigate through the GENI world. Feel free to email us with any questions you might have at help@geni.net.

Select Recent Talks

ICCN 2013 – July 2013

UC Berkley – April 2013

UC Davis – April 2013

U. of MN – February 2013

IEEE CCW – November 2012

ITG Workshop “Visions of Future
Generation Networks” – July 2012

Recent Tutorials & Camps

ICDCS – July 2013

Summer Camp – June 2013

NSDI – April 2013

GEC 16 – March 2013

SIGCSE – March 2013

GEC 15 – November 2012

GEC 14 – July 2012

Summer Camp – June 2012

Tridentcom – June 2012

Fall 2012:

Rudra Dutta (NCSU)
Zongming Fei (U. of KY)
Fraida Fund (NY Poly)
Kaiqi Xiong (RIT)

Spring 2013:

Jay Aikat (U. of NC)
Rudra Dutta (NCSU)
Khaled Harfoush (NCSU)
Jelena Marasevic (Columbia U)
Parmesh Ramanathan (U. Wisc)
Violet Syrotiuk (Arizona State U.)
KC Wang (Clemson)

Fall 2013 (planned):

Zongming Fei (U. of KY)
Christos Papadopoulos (Col. State)

BoF Dinner Tonight: RSVP vthomas@bbn.com

"The author would like to thank the GENI Project Office, especially Niky Riga, for her continuous help and support while setting up the OpenFlow testing environment on the GENI mesoscale deployment."

- *Levente Ilyes, Purdue U., Thesis Acknowledgement*

“Key GENI Concepts” page for newcomers

“How-Tos” for common tasks

On-line tutorials ranging from simple “Hello GENI” type experiments to non-IP experiments

Key GENI Concepts

This page introduces:

1. GENI concepts and terms you will need to know before you use GENI, and
2. the GENI experimenter workflow that ties together these concepts and terms.

Project

A *project* organizes research in GENI, containing both people and their experiments. A project is created and led by a single responsible individual: the *Project Lead*. A project may have many experimenters as its members and an experimenter may be a member of many projects. The Project Lead is ultimately accountable for all actions by project members in the context of the project. GENI experimenters must have Project Lead privileges to create projects. Only faculty and senior members of an organization can be project leads (e.g. students *cannot* be project leads).

The following figure illustrates a situation where a professor is the Lead for two GENI projects, one that he uses for his research project Hactar and the other for the networking class CS404 he is teaching. Members of the project Hactar are the professor's research assistant and his post-doc. Members of the project CS404 are the teaching assistant for CS404 and all the students in the class. The professor gives his teaching assistant administrative privileges to Project CS404 so the assistant is able to add students to the project or remove them.

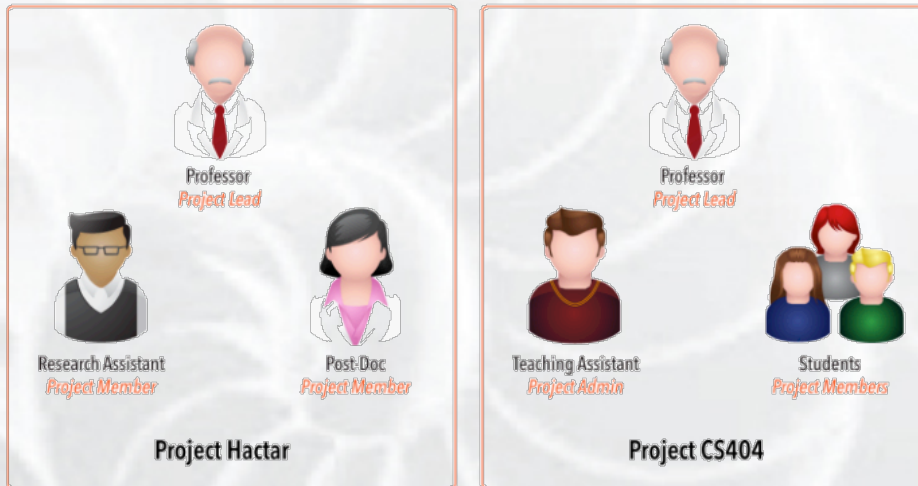

Table of Contents

[Key GENI Concepts](#)

[Project](#)

[Slice](#)

[GENI Aggregates](#)

[The GENI AM API and GENI RSpecs](#)

[Getting Access to GENI and GENI Resources](#)

[Tying this all together: The GENI Experimenter Workflow](#)

[The GENI Glossary](#)

`omni-configure.py`:
Automatically generates a
configuration file for the Omni tool

`ready-to-login.py`: Checks if
compute nodes are ready to use;
shows ssh commands to use to log
in to nodes

Dingbot: Enables experimenters to
write rack-type independent post-
boot scripts

GENI Experimenter Portal makes it
easy for tools to access
experimenter certs and keys

Advocate on behalf of experimenters to tool, service and other GENI developers

- Slice membership implemented by all rack aggregates
- Shared interfaces in InstaGENI
- Reproduce experimenter reported bugs and work with developers

- **Spend more time supporting advanced GENI experimenters (FIA teams, Domain Science, etc.)**
 - **Better tools and documentation have greatly reduced time spent answering common questions**
 - **omni-configure.py: Reduced number of Omni configuration questions from 2–3 per week to ~zero**
 - **Experimenter Portal: Seamless login to tools has almost completely eliminated questions about keys and certs**

- **Ramp up training opportunities**
 - **Packaged training material so community members can do more training**
 - **E.g. Introductory GENI tutorial and Introductory OpenFlow tutorials successfully used at Arizona State and University of Illinois**

GREE-SC13 Out brief

2nd GENI Research and Educational Experiment Summer Camp

Kaiqi Xiong (RIT)

Yin Pan (RIT)

Yong Guan (Iowa State University)

Bing Wang (University of Connecticut)

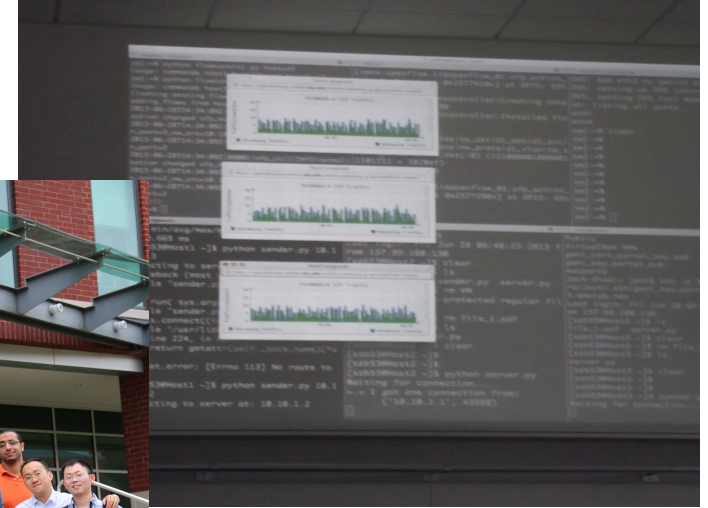

- **June 24th – June 28th**
@ University of Connecticut
- **Wireless theme**
 - **7 Tutorials**
on multiple GENI tools
covering the GENI
Experiment Life Cycle

- **17 attendees**
(ugrad, grad, professor)
- **5 Final Projects w/ live demos!**
 - WiMAX
Surveillance Network
 - OpenFlow
 - VM Migration, Path Restoration,
Resilient Routing, User-controlled
flows-policies
 - GEMINI and GIMI

2 Demos at GEC17 based on SC projects

Great ice cream!
