

# GENI Operations: Monitoring

David P. Wiggins, GPO  
GEC20: June 23, 2014

# Monitoring Architecture Overview

- Aggregates
- Slices
- Slivers
- Users
- Authorities
- Nodes
- Interfaces
- Interface-VLANs
- Links

# What is a link?

✕ = endpoint of a link represented by an interfacevlan, which must then reference a valid interface. The vlan must be the same on both sides of a link.

- Release 1.0 ops-monitoring software on May 1
  - Now at 1.1 patch 2
- Many datastores and collectors are coming online
- Working through issues with
  - the API
  - the implementation
  - the data coming back from the datastores

Utilization History (System Utilization)

Zoom 1hr 6hr 24hr 1wk All From Jun 16, 2014 To Jun 22, 2014

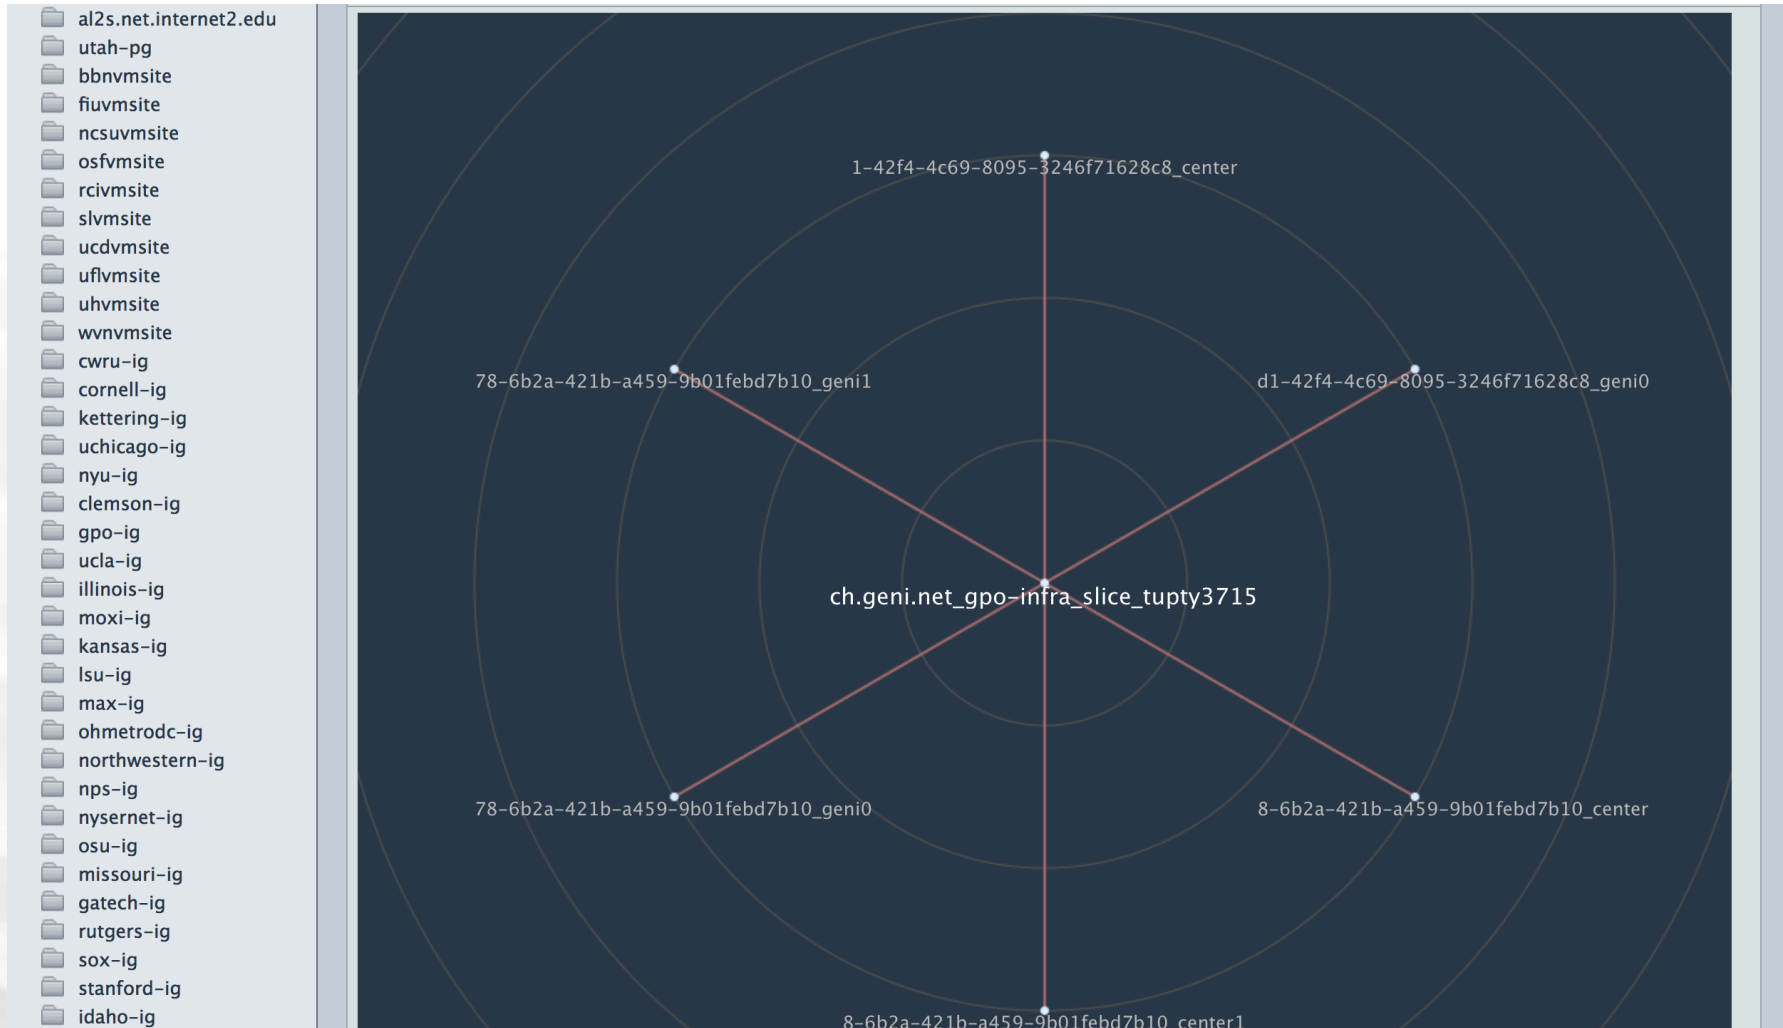

Utilization History (VMs)

Zoom 1hr 6hr 24hr 1wk All From Jun 16, 2014 To Jun 22, 2014

# Plot of Slice/Sliver Association

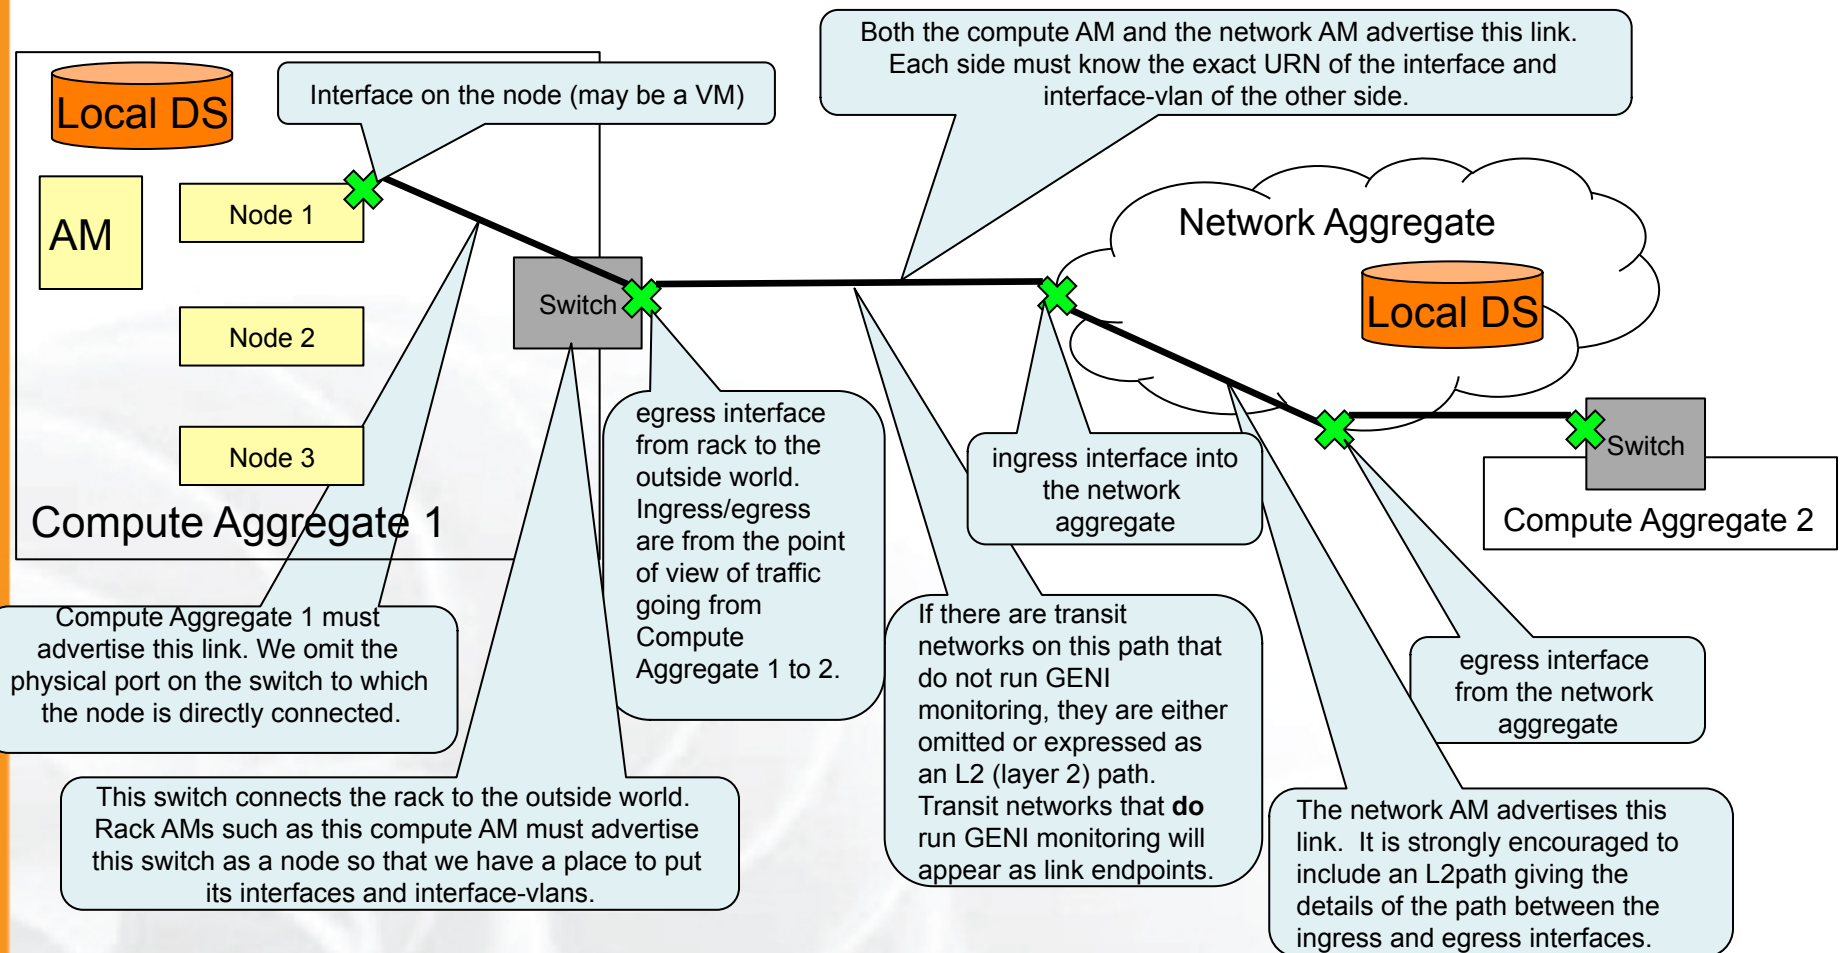

- Improve API (REST/JSON) specification
  - Scalability/performance
  - Consistency
  - Semantic clarity
- Support additional measurements
- Improve the reference implementation
  - Datastore robustness
  - Collector completeness, scalability, ease of use
- Wider production deployment

- ExoGENI: Jonathan Mills, Victor Orlikowski, Ilya Baldin
- Internet2: A.J. Ragusa
- GMOC: Chad Kotil
- InstaGENI: Gary Wong, Leigh Stoller
- MAX: Tom Lehman, Xi Yang
- UKY: Cody Bumgardner, Caylin Hickey
- GPO: Ryan Irwin, Stéphane Blais, Ali Sydney, Heidi Picher Dempsey

# What is a link?

**x** = endpoint of a link represented by an interfacevlan, which must then reference a valid interface. The vlan must be the same on both sides of a link.

Only dataplane links are reported, i.e., links that are part of an experiment and thus can carry experiment traffic. Endpoints of such links are not usually reachable from the arbitrary places on the Internet, in contrast to the control plane.

```
collector=> select id, urn from ops_link_interfacevlan where link_id = 'ion.internet2.edu-100021' ;
```

| id   | urn   |
|--|---|
| ion.internet2.edu/rtr.salt.ion.internet2.edu/ge-10/2/7/885 | urn:publicid:IDN+ion.internet2.edu+interface+rtr.salt:ge-10/2/7:protogeni:885 |
| ion.internet2.edu/rtr.newy.ion.internet2.edu/xs-0/2/2/305  | urn:publicid:IDN+ion.internet2.edu+interface+rtr.newy:xs-0_2_2:*:305          |

(2 rows)

```
collector=> select tag, interface_urn from ops_interfacevlan where id = 'ion.internet2.edu/rtr.salt.ion.internet2.edu/ge-10/2/7/885' ;
```

| tag | interface_urn   |
|-----|---|
| 885 | urn:publicid:IDN+ion.internet2.edu+interface+rtr.salt:ge-10/2/7:protogeni |

(1 row)

```
collector=> select id, properties$role, properties$max_bps from ops_interface
where urn = 'urn:publicid:IDN+ion.internet2.edu+interface+rtr.salt:ge-10/2/7' ;
```

| id   | properties\$role | properties\$max_bps |
|--|------------------|---------------------|
| ion.internet2.edu/rtr.salt.ion.internet2.edu/ge-10/2/7 | transport        | 1000000             |

(1 row)

This demonstrates tracing from a link to its interfacevlans to its interfaces.
