

Service Designing, Deployment and Re-organization

Network service created with the WEB based design tool by graphically combining service components like toy blocks and deployed as well as re-organized across the federated slice with the service deployment tool.

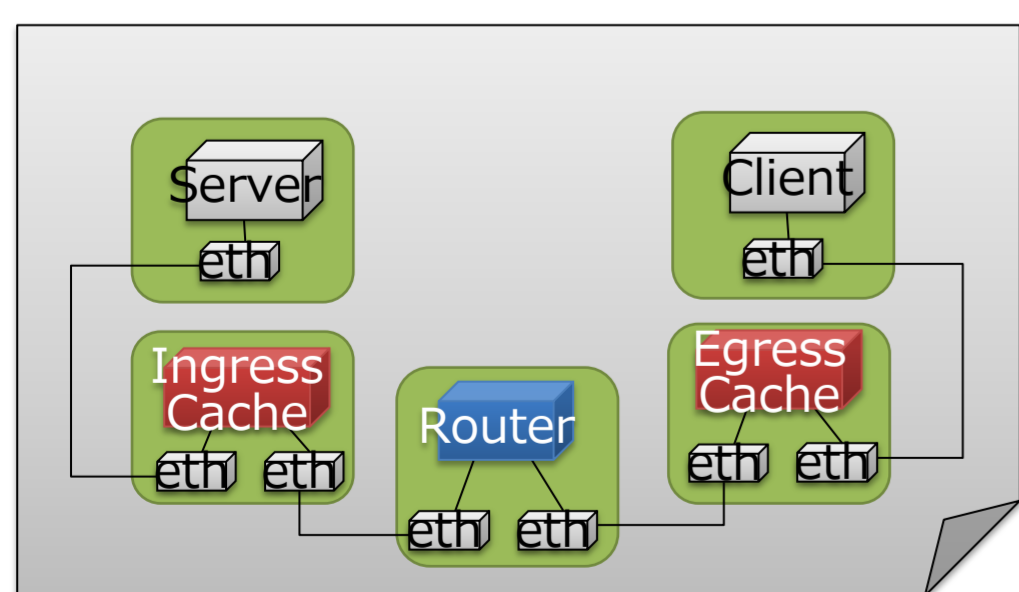

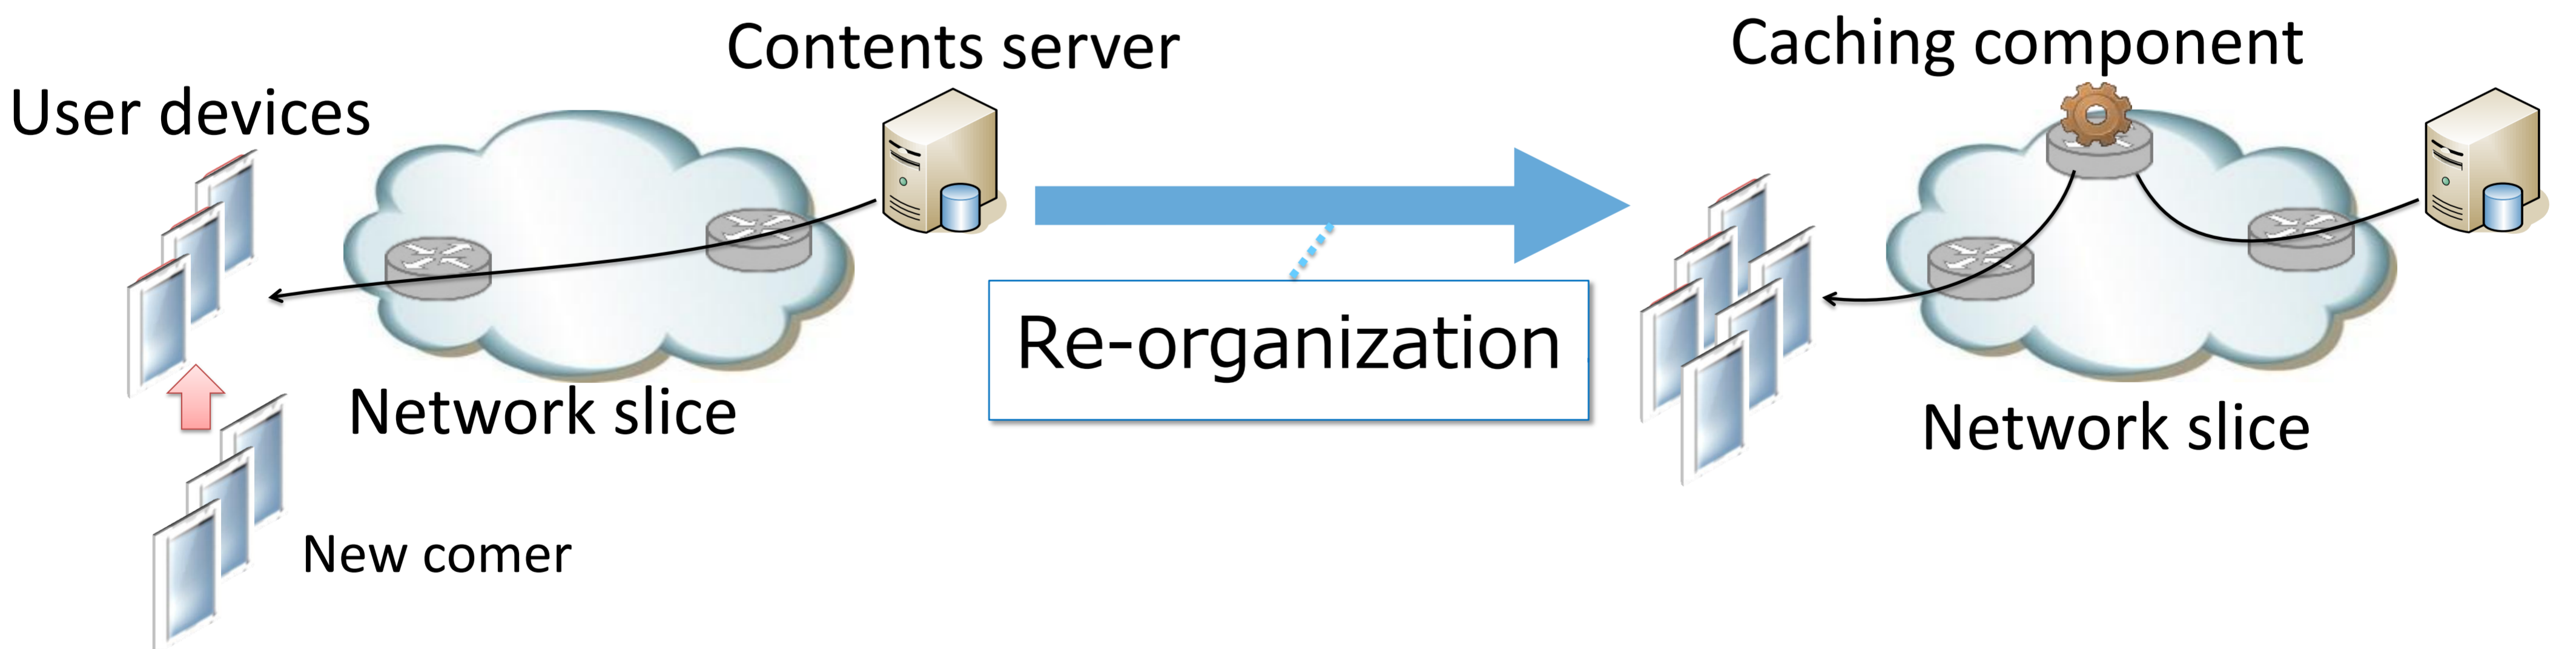

Demo1: Designing and Deployment

WEB based network service design tool

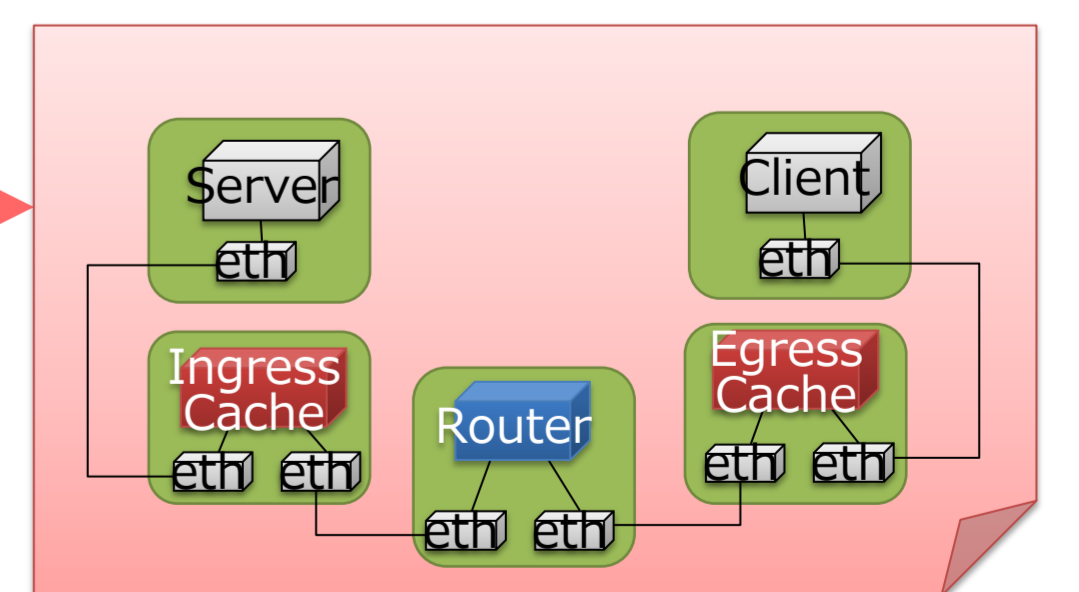

Federated Slice over VNode/ProtoGENI

Demo2: Designing and Deployment

Initial component assignment plan A

Automatic generation of task flow for system change from differences between initial and final system designs

Final component assignment plan B
