

VTS AL2S Slice

GEC 23

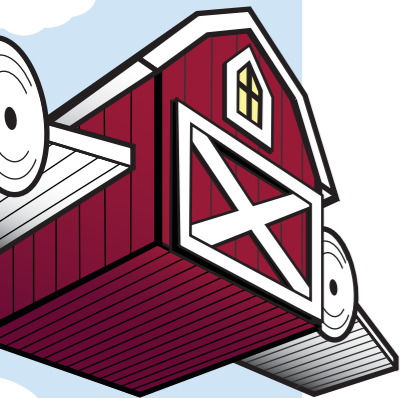

BARNSTORMER
S O F T W O R K S

What is it?

What We Wanted

- “Full-mesh” connectivity between sites
- Without using tons of VLANs
- Without having the flooding of existing multipoint circuits

How It Works

- I2-provided controller application for static MAC circuits
 - Shortest path between sites by route miles
 - One VLAN per site
 - One MAC address per site
- Updates currently managed by I2
