# MC<sup>2</sup>E : MetaCloud Computing Environment

Ruslan L. Smelyanskiy

Applied Research Center for Computer Networks and Moscow State University

GENI Engineering Conference 25 (GEC-25)

# Content

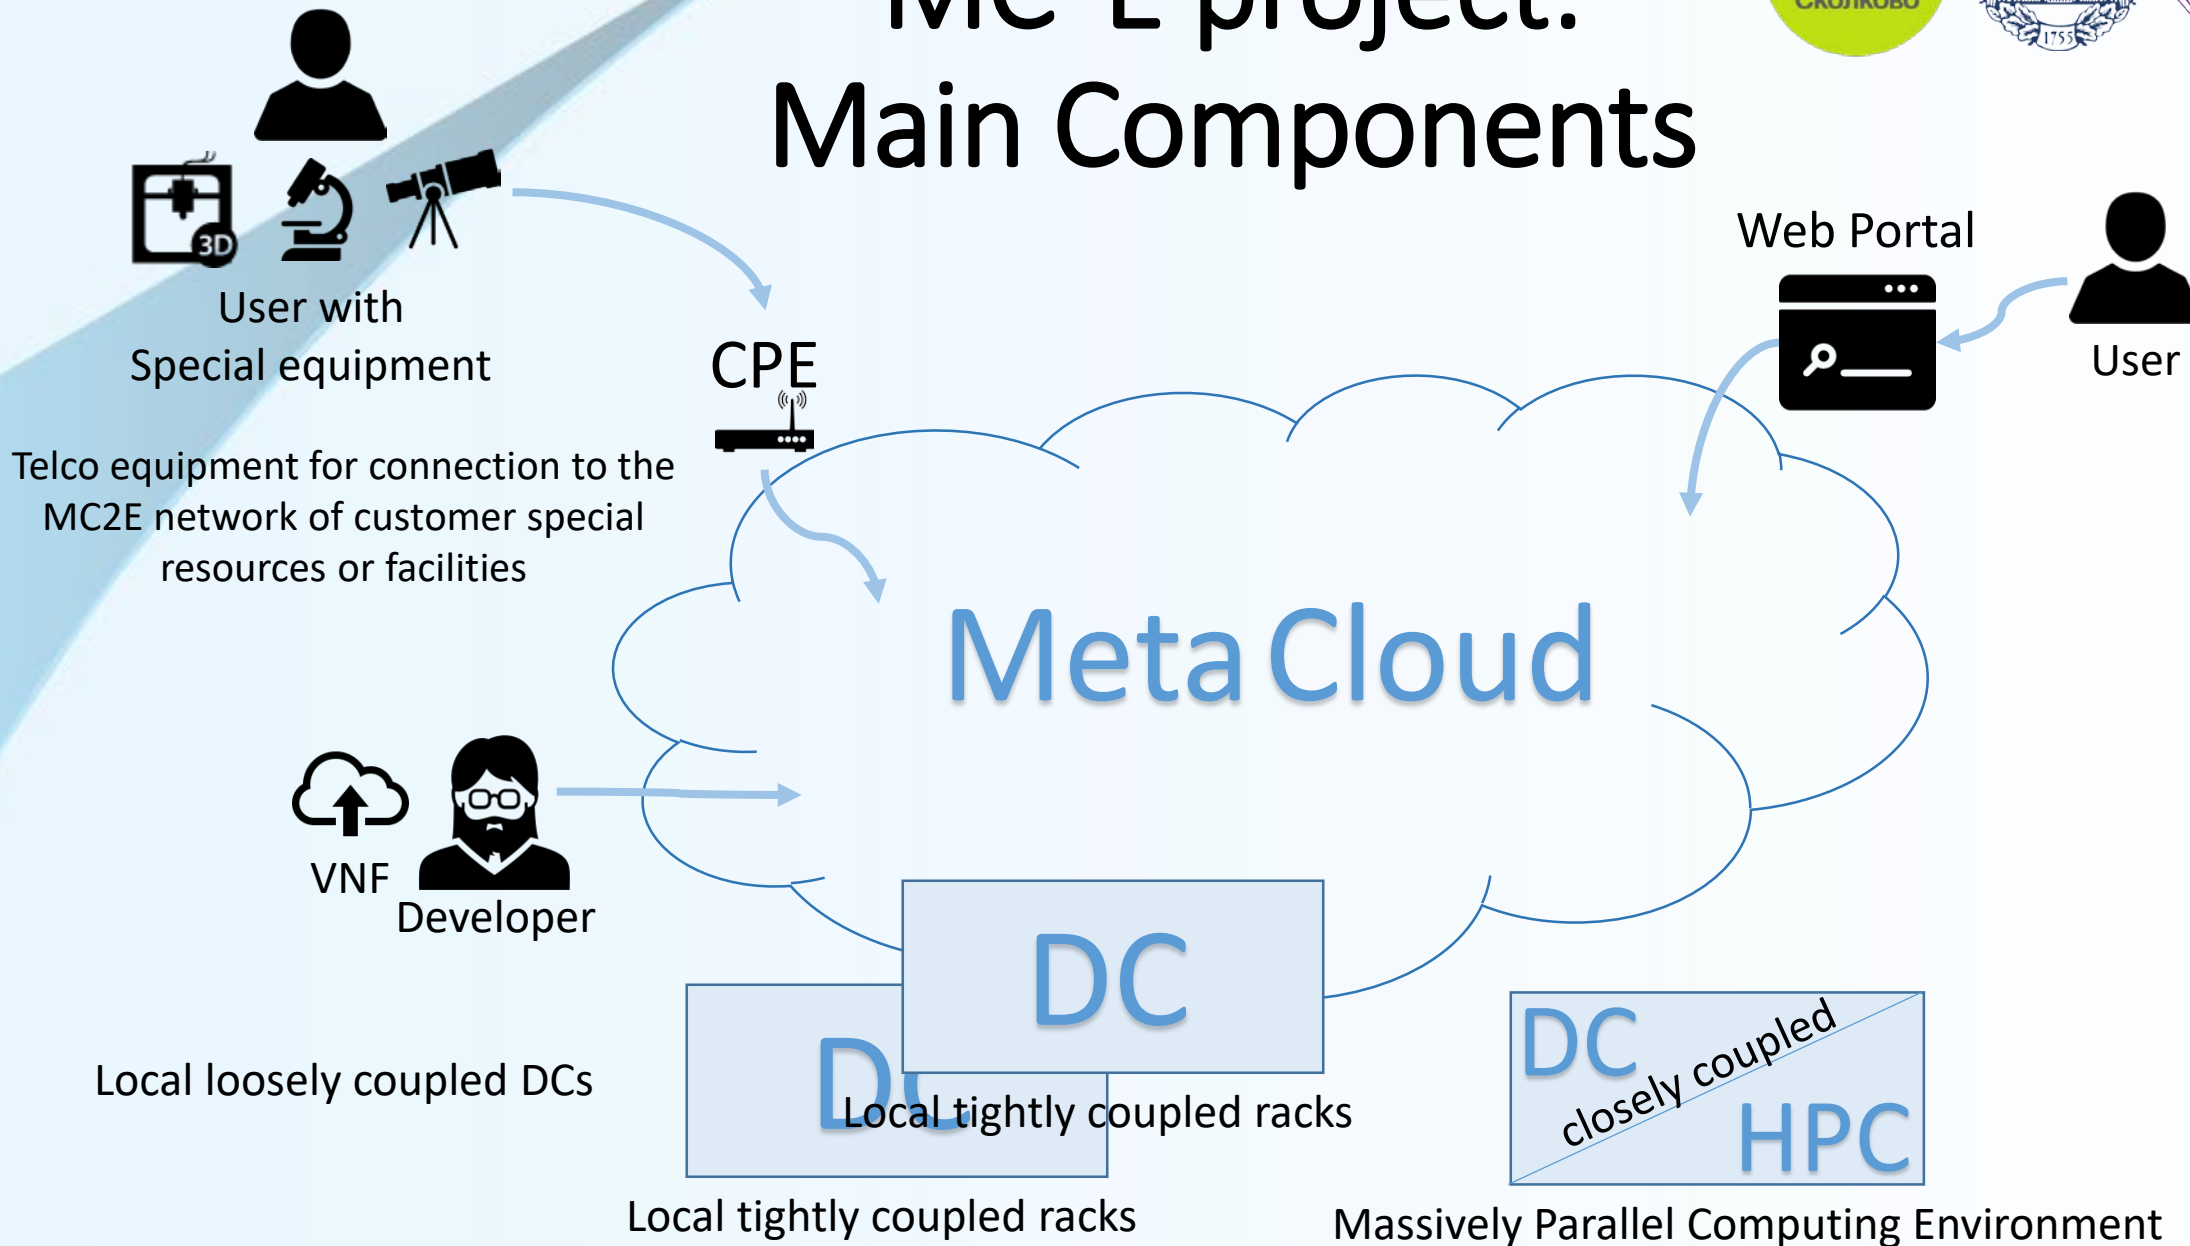

Brief talks where presenters highlight:

- a) Where their individual testbeds will be in 3-5 years - not necessarily where they are projected to be at this point but where they **\*\*should\*\*** be
- b) The special facilities/features/resources they will support
- c) Willingness to interoperate with their colleagues around the world

Mark Berman & Joe Mambretti e-mail dated 13/02/2017

# MC<sup>2</sup>E project: Main Components

# MC<sup>2</sup>E project:

## Service Direction of Attention

### Telco Services

- Packet Flow Centric
- Chaining supportive
- Service continuation and performance sensitive
- Virtual Infrastructure Particular

### Enterprise services

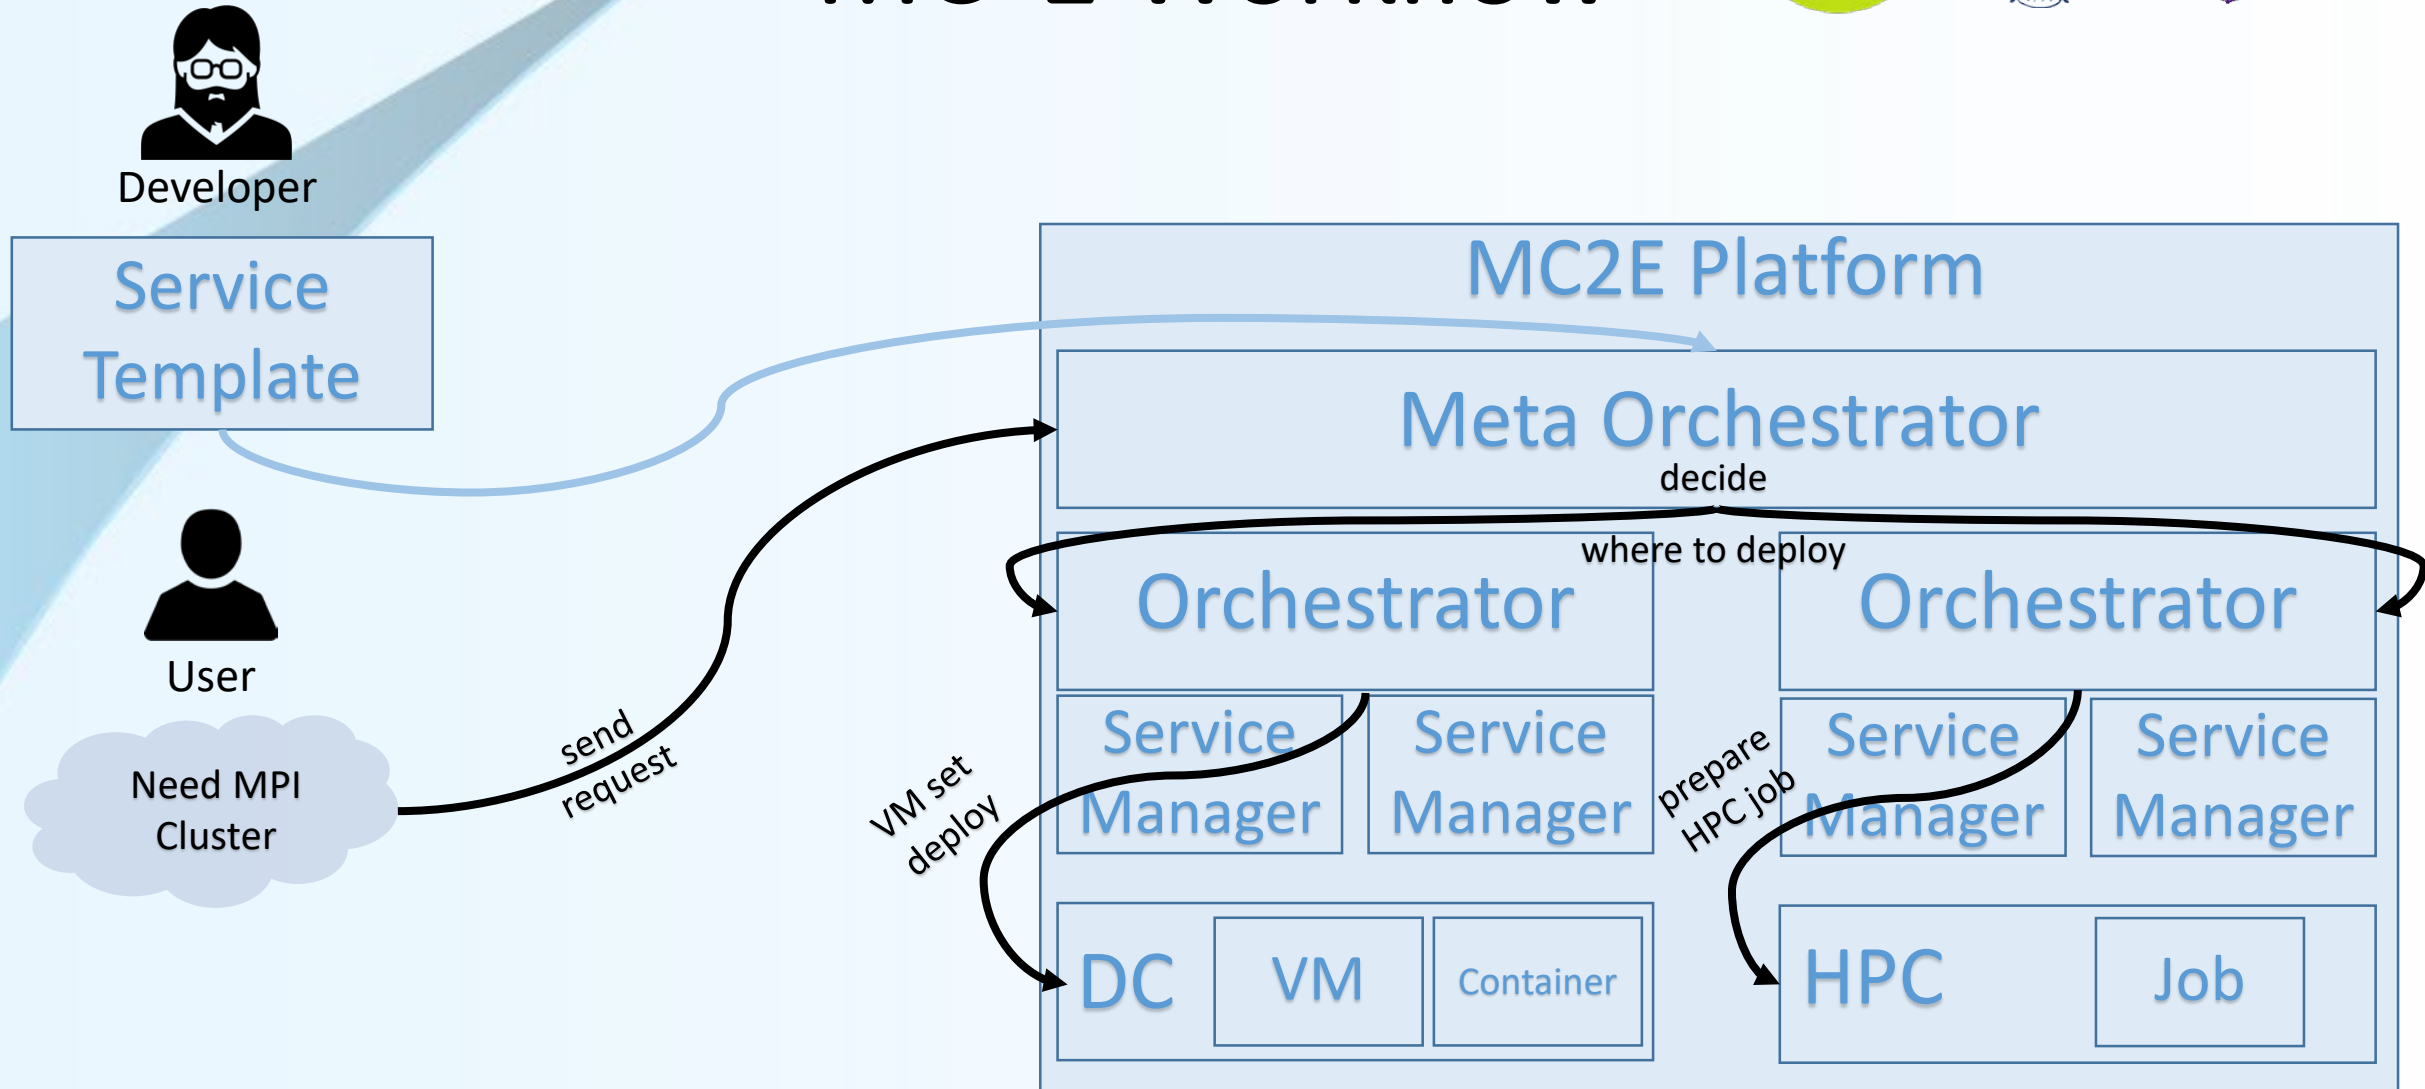

- Application centric
- SLA not so much particular
- Soft requirements to service continuation

### Academic / Research Services

# MC<sup>2</sup>E Workflow

# MC<sup>2</sup>E project: Service Template

## How to describe a service?

**TOSCA description**

Infrastructure description

**Image (optional)**

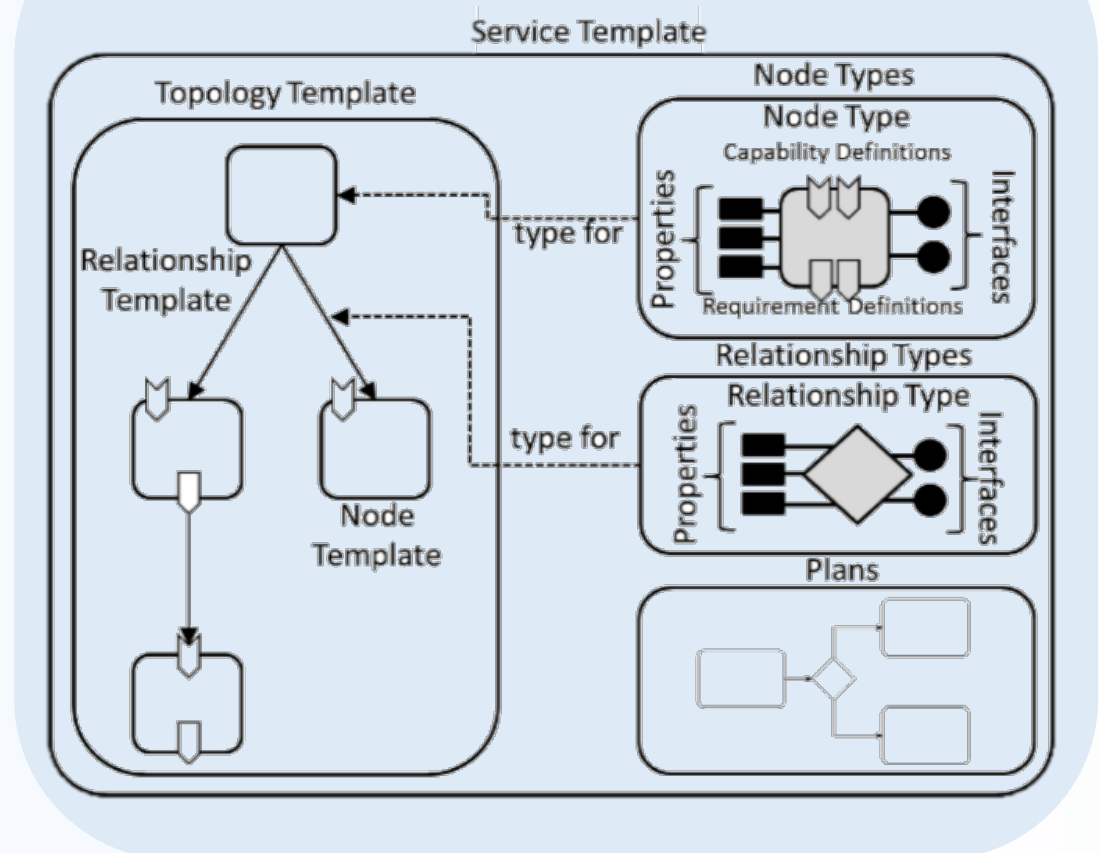

RAW, OVA, VMDK...

**Scripts**

Bash/Shell...

Containment  
Connectivity  
Composition  
Reuse

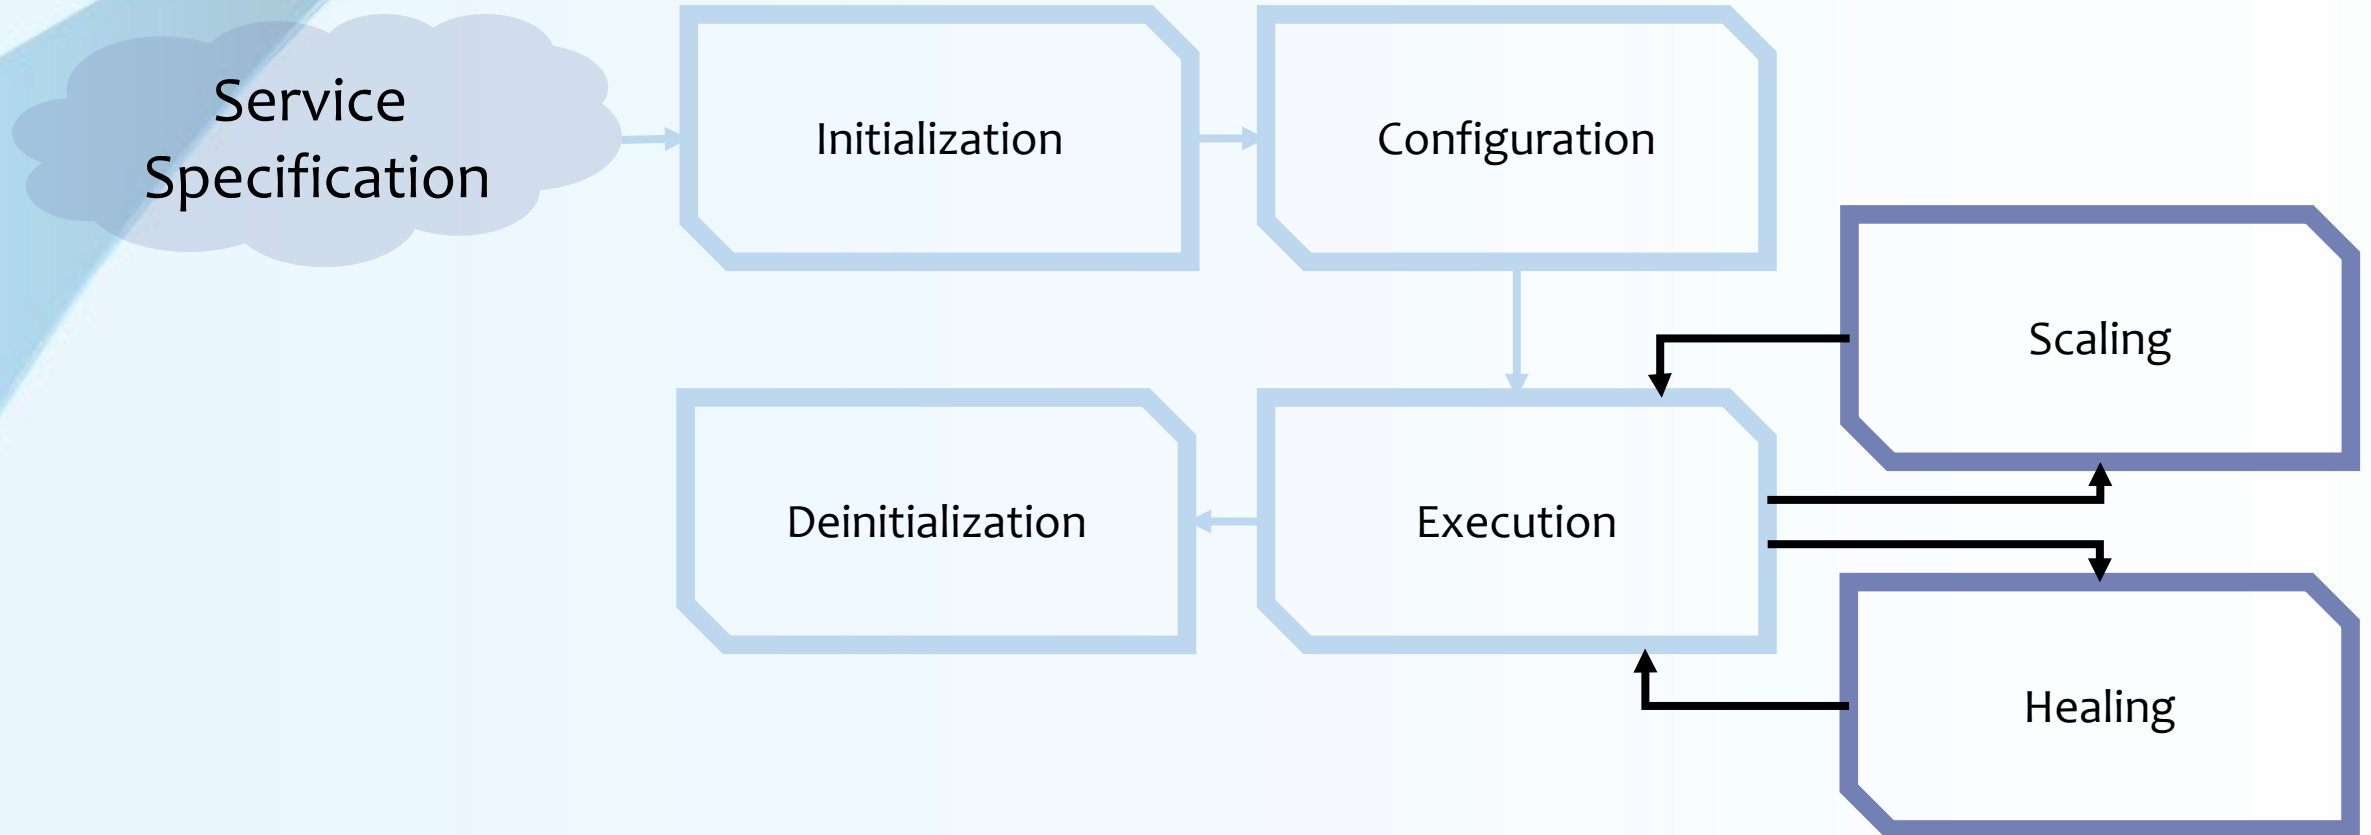

## TOSCA Description

## The first Russian SDN-controller – RUNOS (RUSSIAN Network Operation System)

### RUNOS Specifications:

- 30 million flows per sec,
- 45 mcs to set up a new connection,
- 1000 switches support,
- GUI.

Target clients: Network administrators and engineers in DC, Telecom, ISP, developers

Integration OpenFlow switches: NEC, IBM, HP, Arista, Juniper, Brocade, Extreme Networks, Huawei

Network applications: L2/L3 routing with QoS and multithreads forwarding multi-flows routing, network resources virtualization, Anti DDOS, network resources monitoring, load balancing, traffic filtration, authentication, SPAN-ports, NAT, ARP, DNS, DHCP, BGP

### Software Open Flow switch on x86 servers

- x86 servers with lot of NICs
  - OC Linux, Ubuntu 14.04, REHL.
  - Software switch a kind of Open vSwitch
  - Network stack on Intel DPDK
- Ports: Up to 24x 1Gbps / Up to 12x 10Gbps / 80Gbps per unit
- Protocols: OpenFlow1.3, LACP, Vlan, BFD, STP, QoS, IPv6, GRE, VxLan

- + full OpenFlow 1.3 support (all fields, metering, QoS)
- + unlimited number of tables and records
- + easy to customize
- + performance scaling

QoS management by FDMP

## Cloud platform with SLA support «Cloud Conductor» (C2)

MANO  
NFV life-cycle support

Meta-orchestrator for DC  
heterogeneous cloud  
infrastructure

Resource scheduling

Cloud Conductor scheduler takes into account :

- VM RAM
- CPU units and cores
- HW resources accessibility in local network

Monitoring: SDN allows to collect data on loading resources, to react on incidents in network and to manage forwarding policy

Cloud Conductor allows network resources virtualization to fit user defined channels widths.

### Hardware Switch on network processor

- + OpenFlow v1.3 support
- + Performance up to 100 Gb/sec (w/o over subscription) и 180 mln packets per sec
- + Group table support including reserve and load balance
- + 3 flow table support with arbitrary dimensions and purposes (TCAM with 208 bit key, L2 hash, L3 + L4 hash)
- + QoS: supporting 4 priority queues (4PQ) per a port
- + Support counters for statistics per flows and ports
- + 11x40 Gb/sec or 44x10 Gb/sec or 4x100 Gb/sec
