Integration: Finishing Spiral 1

- Running demonstration experiments end-to-end
 - Spiral 1 ends Oct 1 plan now
 - Roughly means: Experiment control tools patch together the substrates of a cluster using it's clearinghouse
- Both Layer 3 and Layer 2 expected in most cases
- Wide area connectivity
- Documentation is part of integration, explaining once on the wiki is easier than explaining to each new project.

OMIS integration summary soon to be a wiki page.

The areas of cluster integration

Spreadsheet shows how each project integrates with other projects in the same cluster

Control Plane

Level of integration with control plane of other projects in cluster in two areas:

- CH: Communications with the ClearingHouse
- AM/CM: Communications with Aggr./Comp. Managers
- Experiment Plane
 Connectivity to other substrates at Layer2/Layer3

Suggest additional ideas, remember this is a high level summary, not too much detail.

The Color Code

"On track" Expected to be done in Spiral 1

"Needs work" Could be in Spiral 1 if connectivity or other issues can be worked out

"Not in Spiral 1" Excluded from Spiral 1 work

"Unknown" Not enough information to decide

"N/A" Not part of this project

The Chart
