

GENI

Exploring Networks of the Future

An introduction

GENI Project Office
November 2010
www.geni.net

Sponsored by the National Science Foundation

- GENI – Exploring future internets at scale
- Introducing GENI: an example
- GENI's growing suite of infrastructure
- GENI's evolving control framework
- How can you participate?

Global networks are creating extremely important new challenges

Science Issues

We cannot currently understand or predict the behavior of complex, large-scale networks

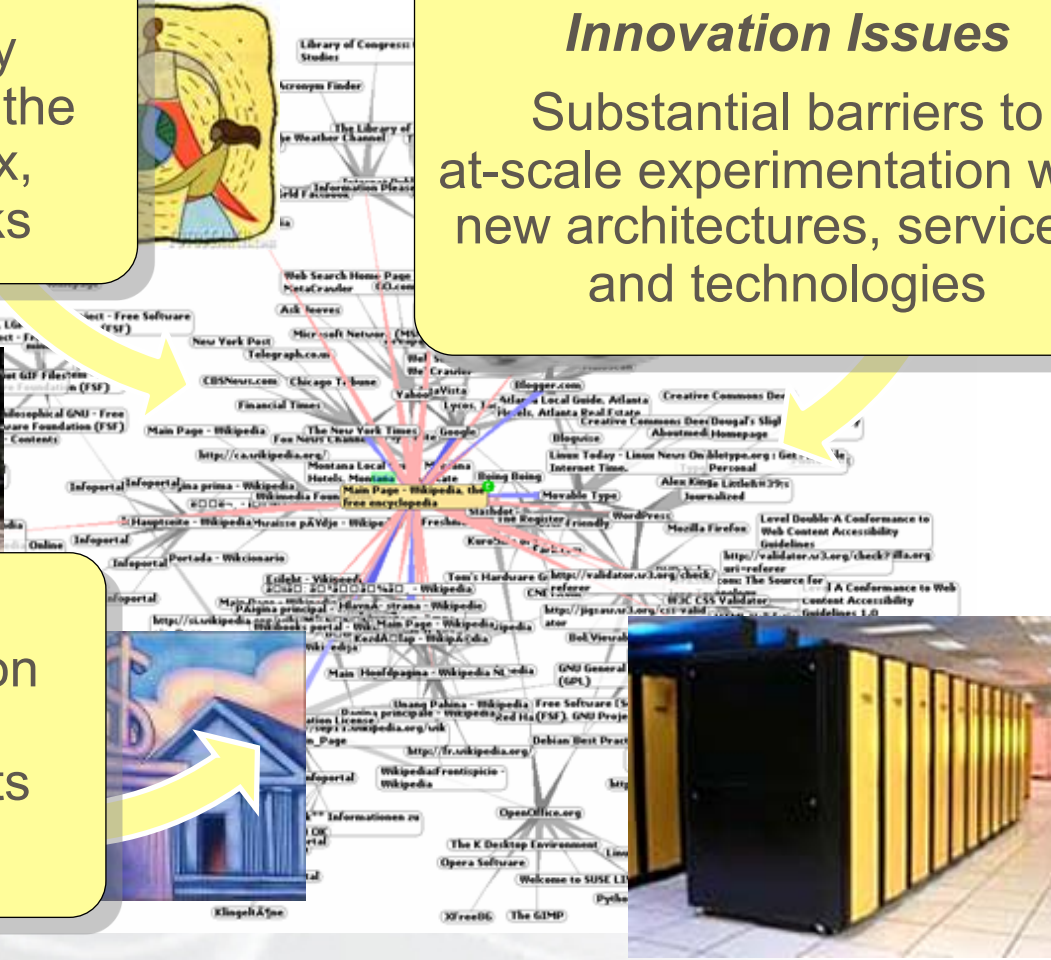

Innovation Issues

Substantial barriers to at-scale experimentation with new architectures, services, and technologies

Society Issues

We increasingly rely on the Internet but are unsure we can trust its security, privacy or resilience

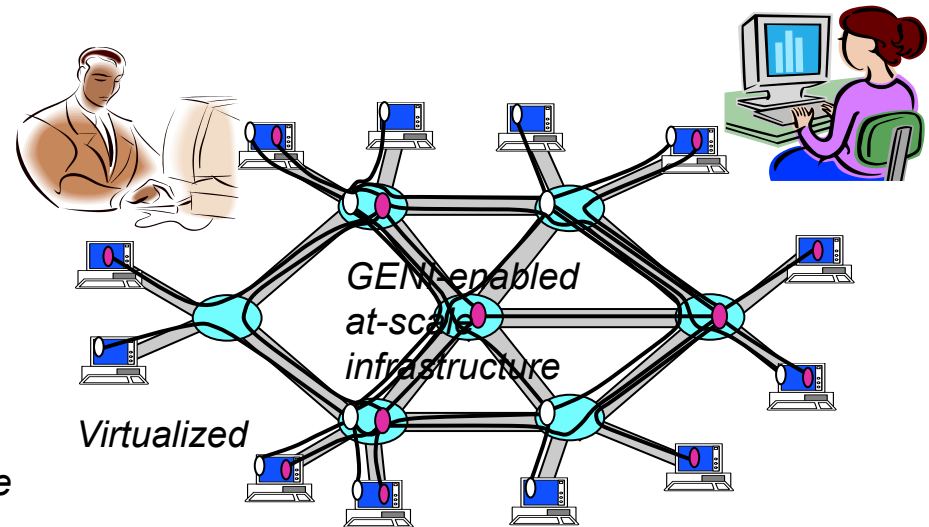

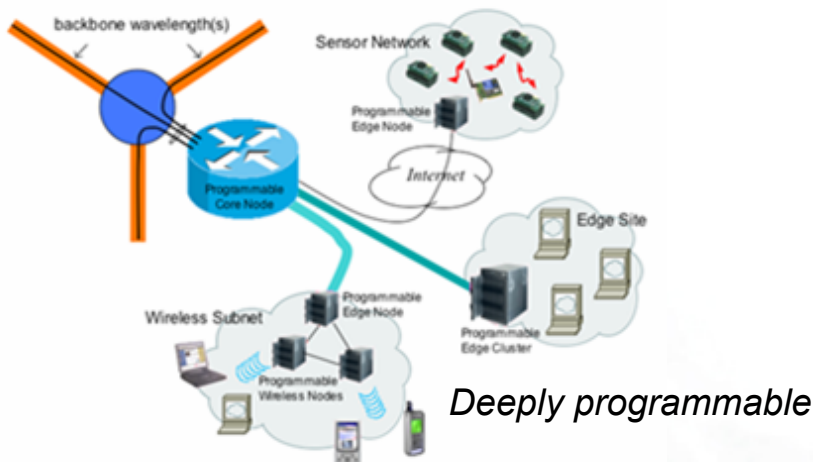

- GENI is a virtual laboratory for **exploring future internets at scale**, now rapidly taking shape in prototype form across the United States
- GENI creates major opportunities to *understand, innovate, and transform* global networks and their interactions with society.
- GENI opens up new areas of research at the frontiers of network science and engineering, with significant potential for socio-economic impact.

- **GENI is enabling two classes of “at scale” experiments:**
 - **Controlled and repeatable** experiments, to help improve scientific understanding of complex, large-scale networks; and
 - **“In the wild” trials** of services that piggyback or connect to today’s Internet and **engage large numbers of participants.**
 - With instrumentation and data archival / analysis tools for both
- GENI creates a smooth transition path from “innovative experiment” up to useful service at significant scale
- **GENI campuses and students “live in the future”** as early adopters of leading-edge research ideas

GENI Conceptual Design

Infrastructure to support at-scale experimentation

Programmable & federated, with end-to-end virtualized "slices"

- **How can we afford / build GENI at sufficient scale?**
 - Clearly infeasible to build research testbed “as big as the Internet”
 - Therefore we are “GENI-enabling” testbeds, commercial equipment, campuses, regional and backbone networks
 - **Students are early adopters / participants in at-scale experiments**
 - Key strategy for building an at-scale suite of infrastructure

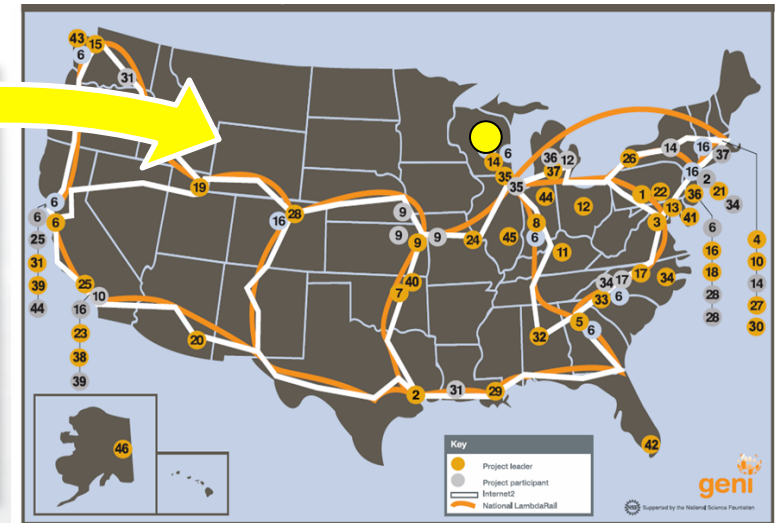

HP ProCurve 5400 Switch

NEC WiMAX Base Station

GENI-enabled equipment

GENI-enabled campuses, students as early adopters

“At scale” GENI prototype

GENI is rapidly taking shape across the US

GENI-enabling testbeds, campuses, and backbones

- GENI – Exploring future internets at scale
- **Introducing GENI: an example**
- GENI's growing suite of infrastructure
- GENI's evolving control framework
- How can you participate?

A bright idea

I have a great idea! The original Internet architecture was designed to connect one computer to another – but a better architecture would be fundamentally based on PEOPLE and CONTENT!

*That will never work! It won't scale!
What about security? It's impossible
to implement or operate! Show me!*

My new architecture worked great in the lab, so now I'm going to try a larger experiment for a few months.

And so he poured his experimental software into clouds, distributed clusters, bulk data transfer devices ('routers'), and wireless access devices throughout the GENI suite, and started taking measurements . . .

He uses a modest slice of GENI, sharing its infrastructure with many other concurrent experiments.

It turns into a really good idea

Boy did I learn a lot! I've published papers, the architecture has evolved in major ways, and I'm even attracting real users!

Location-based social networks are really cool!

His experiment grew larger and continued to evolve as more and more real users opted in . . .

His slice of GENI keeps growing, but GENI is still running many other concurrent experiments.

Experiment turns into reality

My experiment was a real success, and my architecture turned out to be mostly compatible with today's Internet after all – so I'm taking it off GENI and spinning it out as a real company.

I always said it was a good idea, but way too conservative.

Meanwhile . . .

I have a great idea! If the Internet were augmented with a scalable control plane and realtime measurement tools, it could be 100x as robust as it is today . . . !

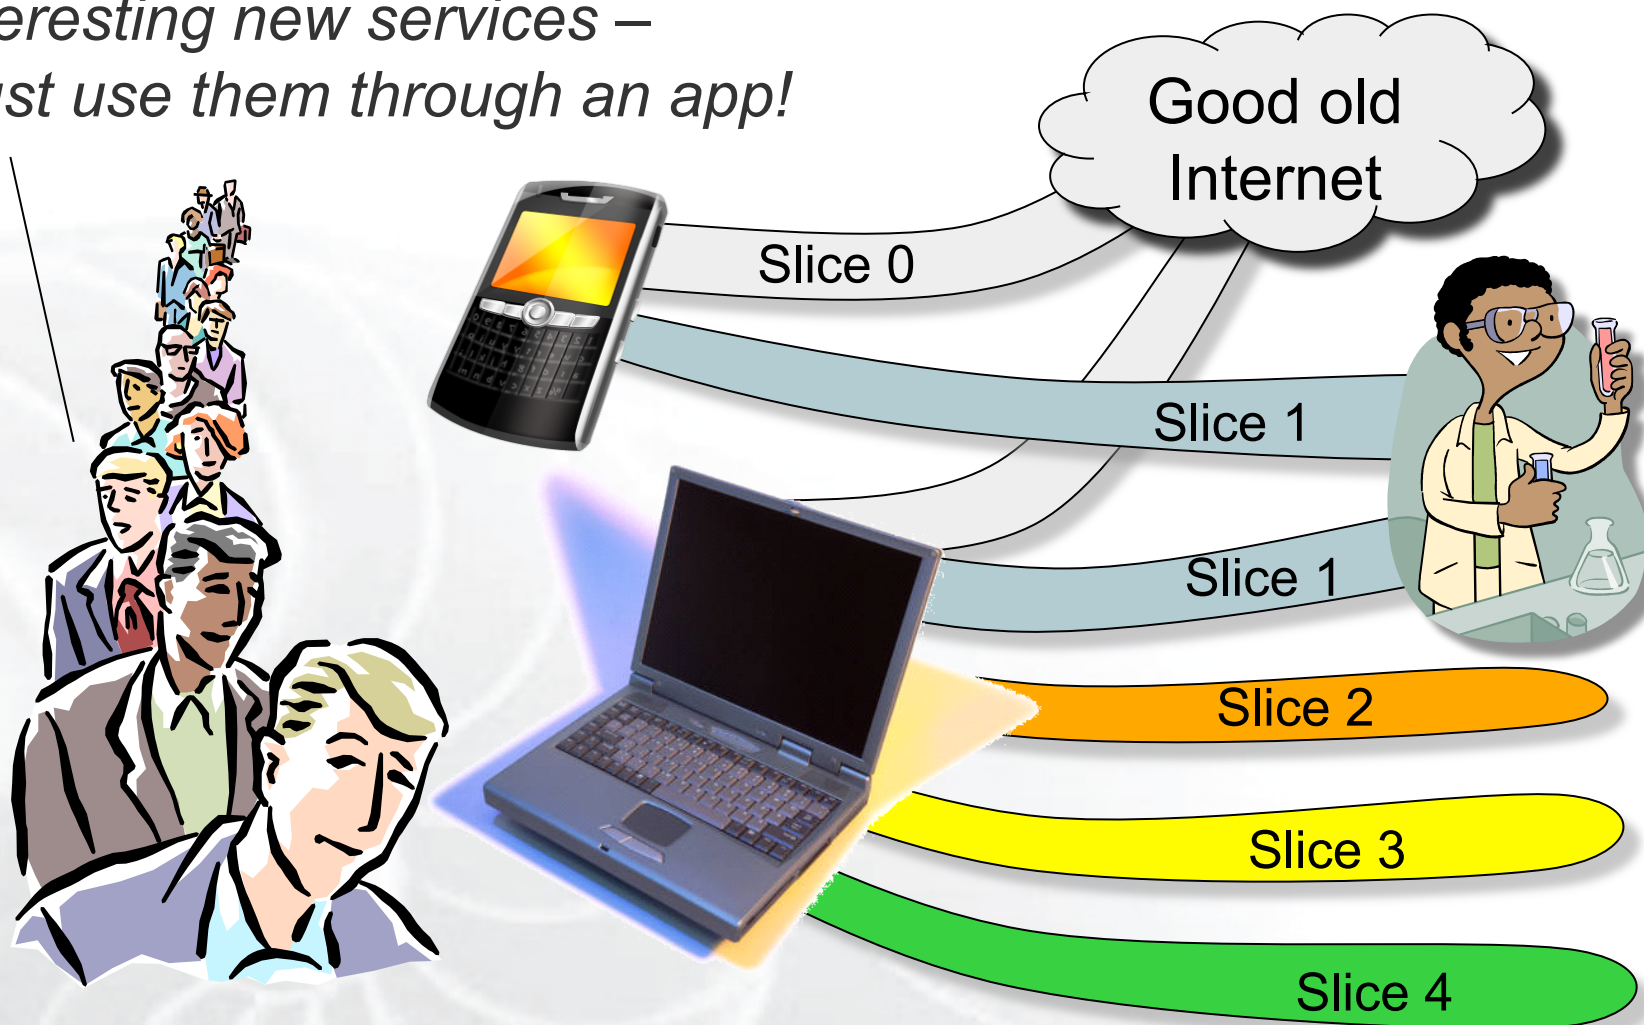

And I have a great concept for incorporating live sensor feeds into our daily lives !

If you have a great idea, check out the **NSF CISE research programs for current opportunities.**

The (opt-in) user's view

*Interesting new services –
I just use them through an app!*

- GENI is meant to enable . . .
 - **At-scale experiments**, which may or may not be compatible with today's Internet
 - **Both repeatable and “in the wild” experiments**
 - **‘Opt in’ for real users** into long-running experiments
 - Excellent **instrumentation and measurement** tools
 - **Large-scale growth for successful experiments**, so good ideas can be shaken down at scale

GENI creates a huge opportunity for ambitious research!

- GENI – Exploring future internets at scale
- Introducing GENI: an example

- GENI's evolving control framework
- How can you participate?

Spiral Development

GENI grows through a well-structured, adaptive process

GENI Prototyping Plan

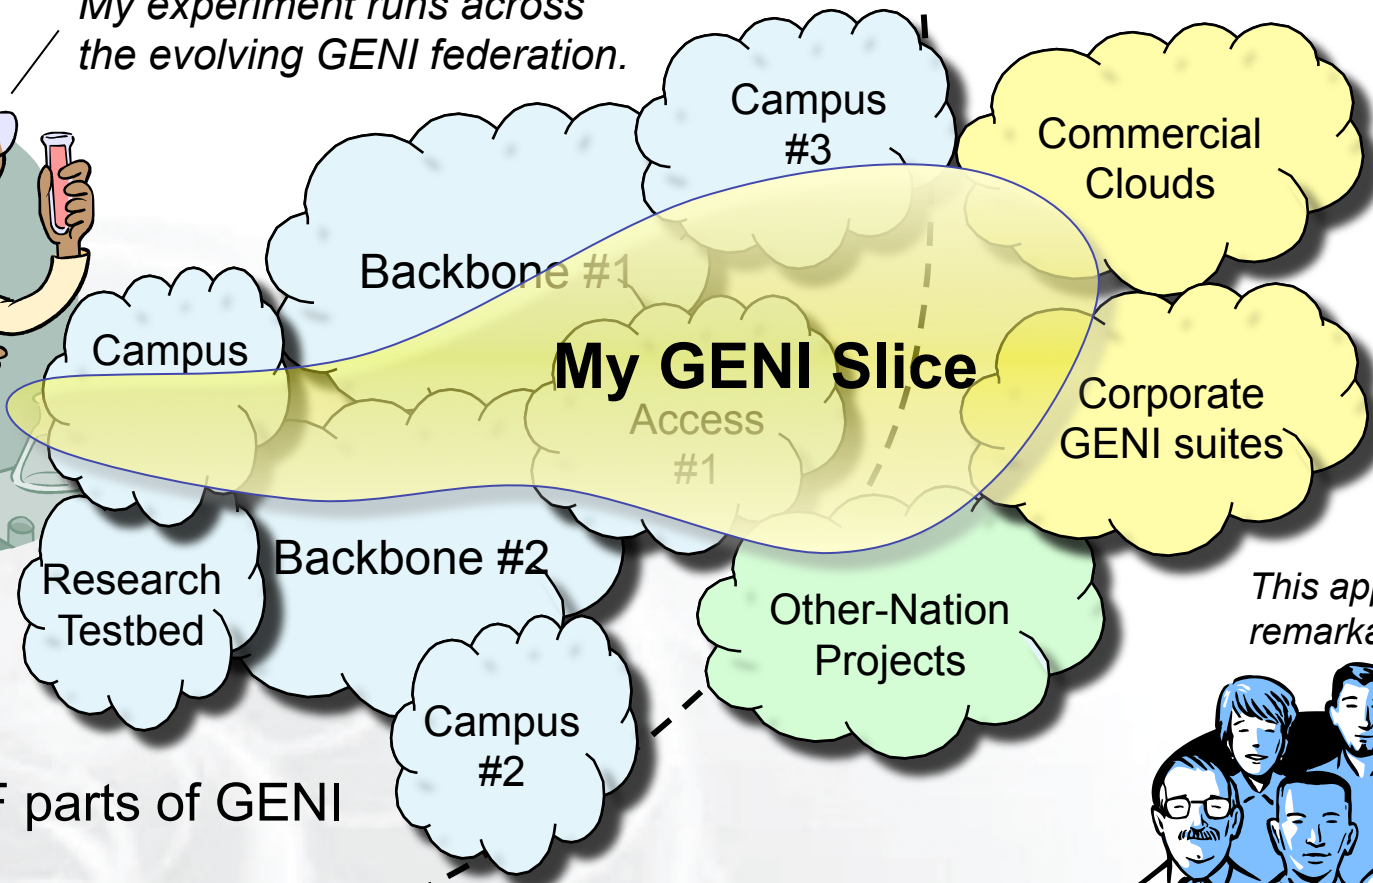

- **GENI Spiral 2**
Early experiments, meso-scale build, interoperable control frameworks, ongoing integration, system designs for security and instrumentation, definition of identity management plans.

- ★ **Envisioned ultimate goal**
Large-scale distributed computing resources, high-speed backbone nodes, nationwide optical networks, wireless & sensor nets, etc.

GENI grows by “GENI-enabling” heterogeneous infrastructure

My experiment runs across the evolving GENI federation.

NSF parts of GENI

This approach looks remarkably familiar . . .

Goals: avoid technology “lock in,” add new technologies as they mature, and potentially grow quickly by incorporating existing infrastructure into the overall “GENI ecosystem”

Spiral 1 infrastructure examples

DRAGON core nodes
Mid-Atlantic Crossroads

WAIL, U. Wisconsin-Madison

DieselNet, U. Mass Amherst

ViSE,
U. Mass Amherst

SPPs, Wash U.

ORBIT, Rutgers WINLAB

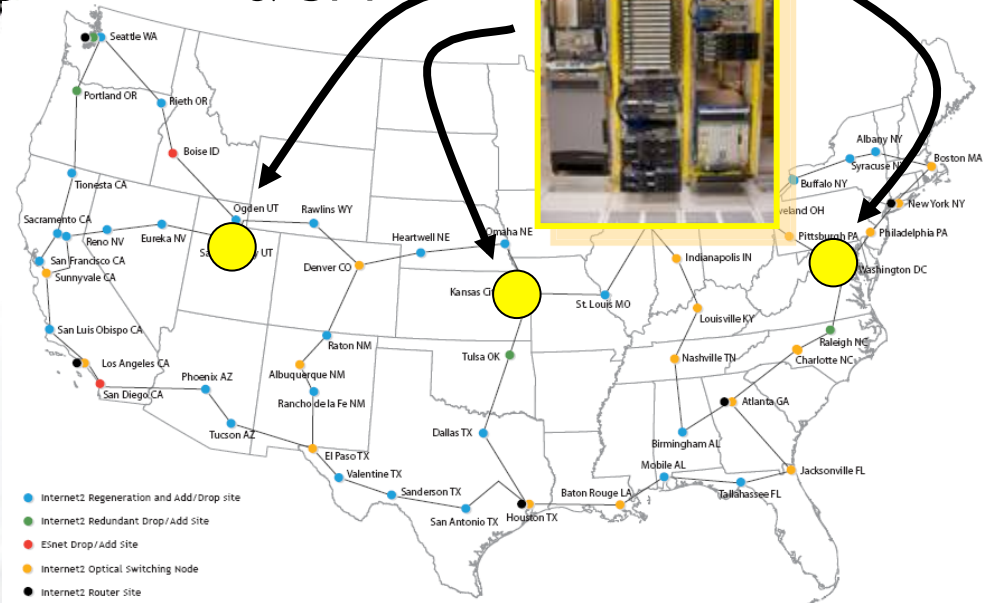

National LambdaRail and Internet2

National LambdaRail
Up to 30 Gbps bandwidth

Internet2

ProtoGENI & SPP

Buildout for GENI prototyping within two national footprints to provide end-to-end GENI slices (IP or non-IP)

Spiral 2 infrastructure examples

Building the GENI Meso-scale Prototype

OpenFlow

- Stanford
- U Washington
- Wisconsin
- Indiana
- Rutgers
- Princeton
- Clemson
- Georgia Tech

WiMAX

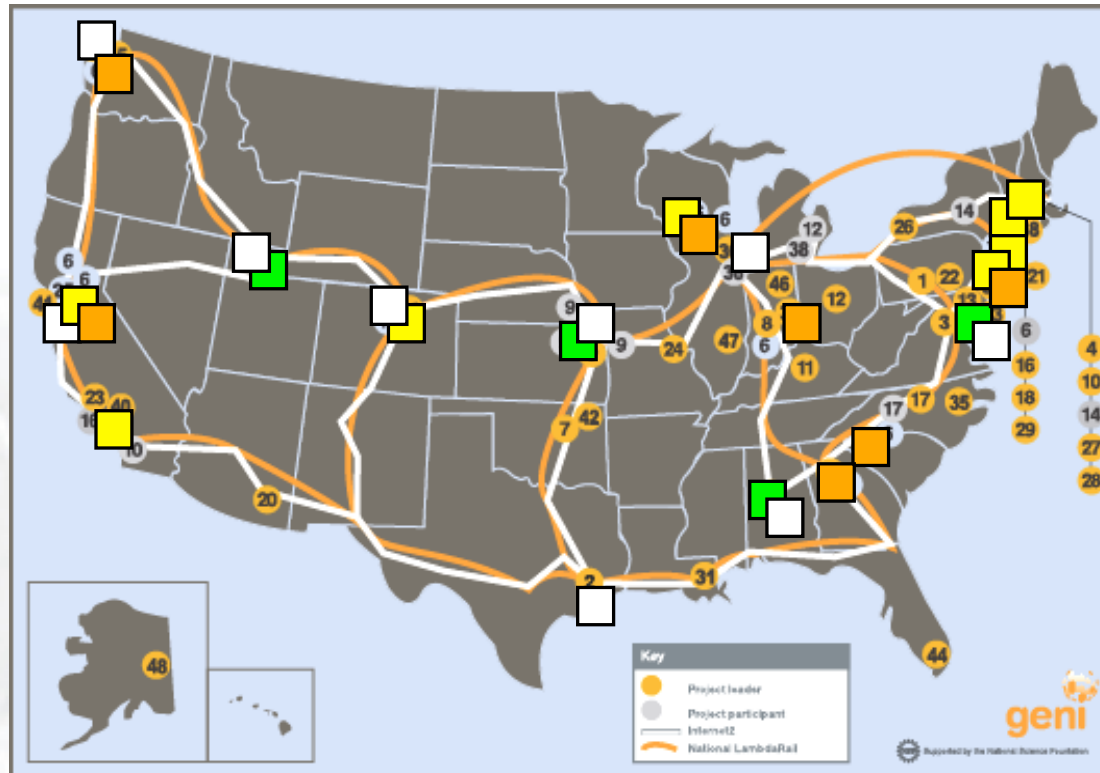

- Stanford
- UCLA
- UC Boulder
- Wisconsin
- Rutgers
- Polytech
- UMass
- Columbia

ShadowNet

- Salt Lake City
- Kansas City
- DC
- Atlanta

OpenFlow Backbones

- Seattle
- Salt Lake City
- Sunnyvale
- Denver
- Kansas City
- Houston
- Chicago
- DC
- Atlanta

HP ProCurve 5400 Switch

Juniper MX240 Ethernet Services Router

NEC WiMAX Base Station

Toroki LightSwitch 4810

Arista 7124S Switch

NEC IP8800 Ethernet Switch

Campus GENI build-outs

Researchers teaming with campus IT staff

Nick Feamster
PI

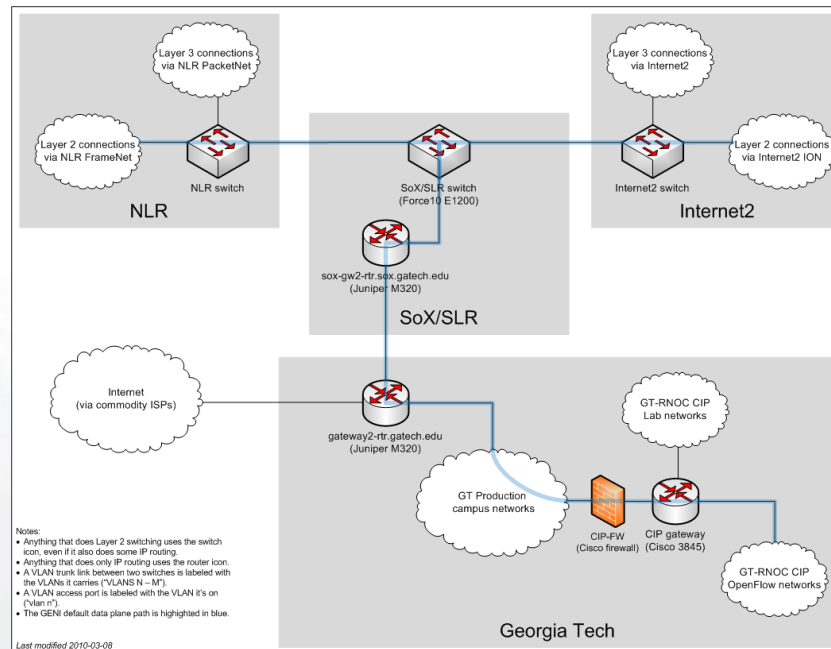

Ellen Zegura

Russ Clark,
GT-RNOC

Ron Hutchins,
OIT

- OpenFlow in 2 GT-RNOC lab bldgs **now**
- OpenFlow/BGPMux coursework **now**
- Dormitory trial
- Access control, authentication focus

How are we "GENI-enabling" campuses?

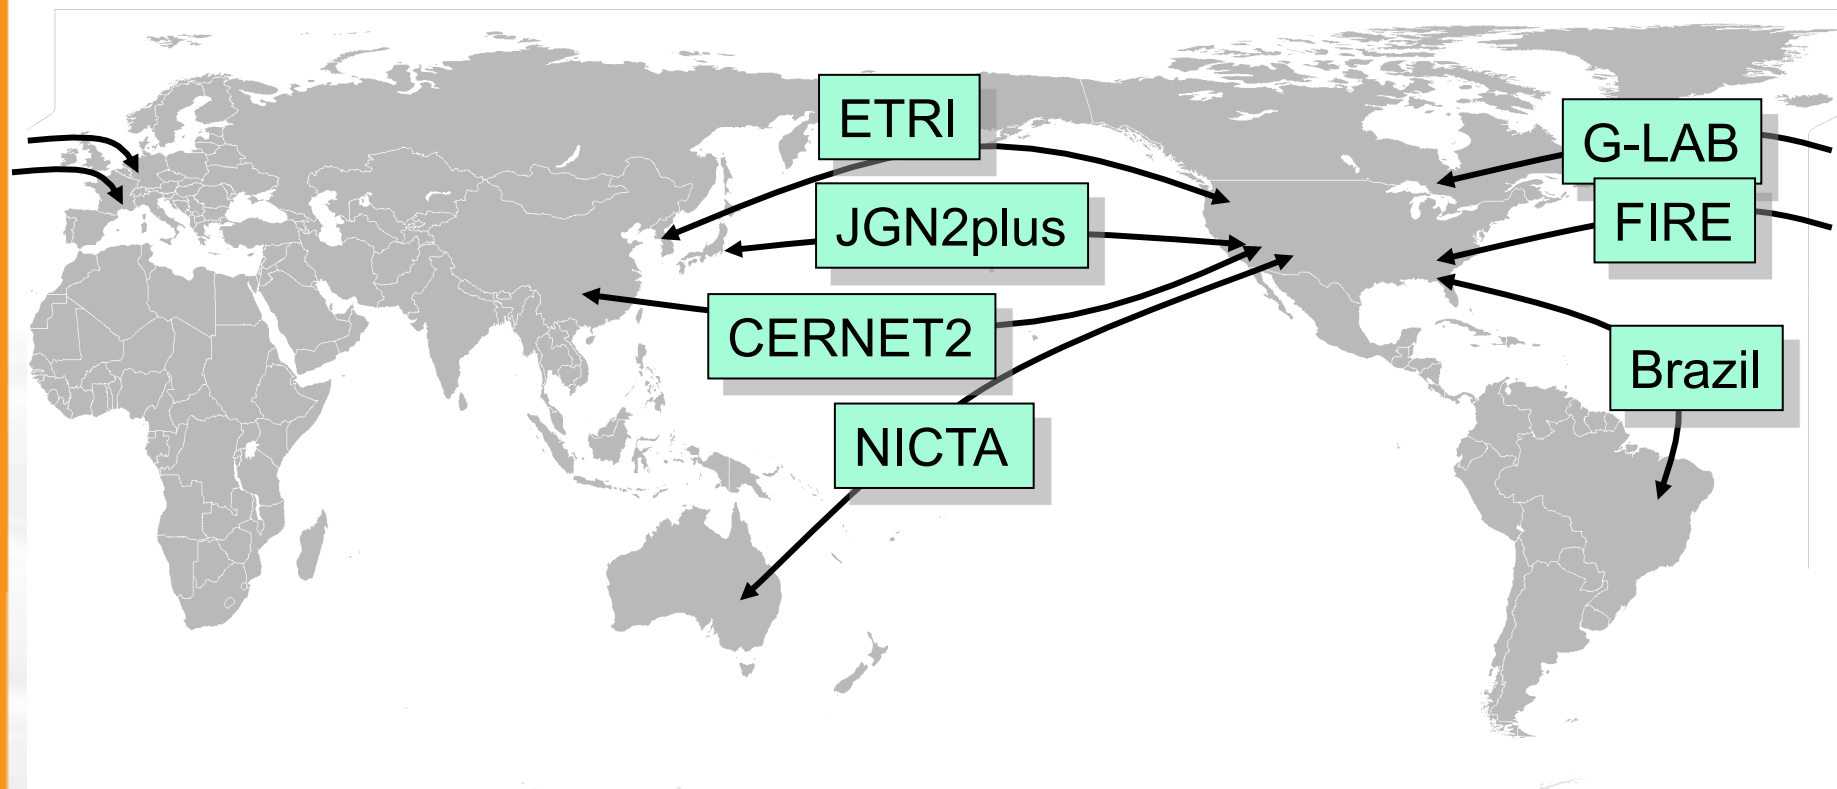

WiMAX

GENI racks

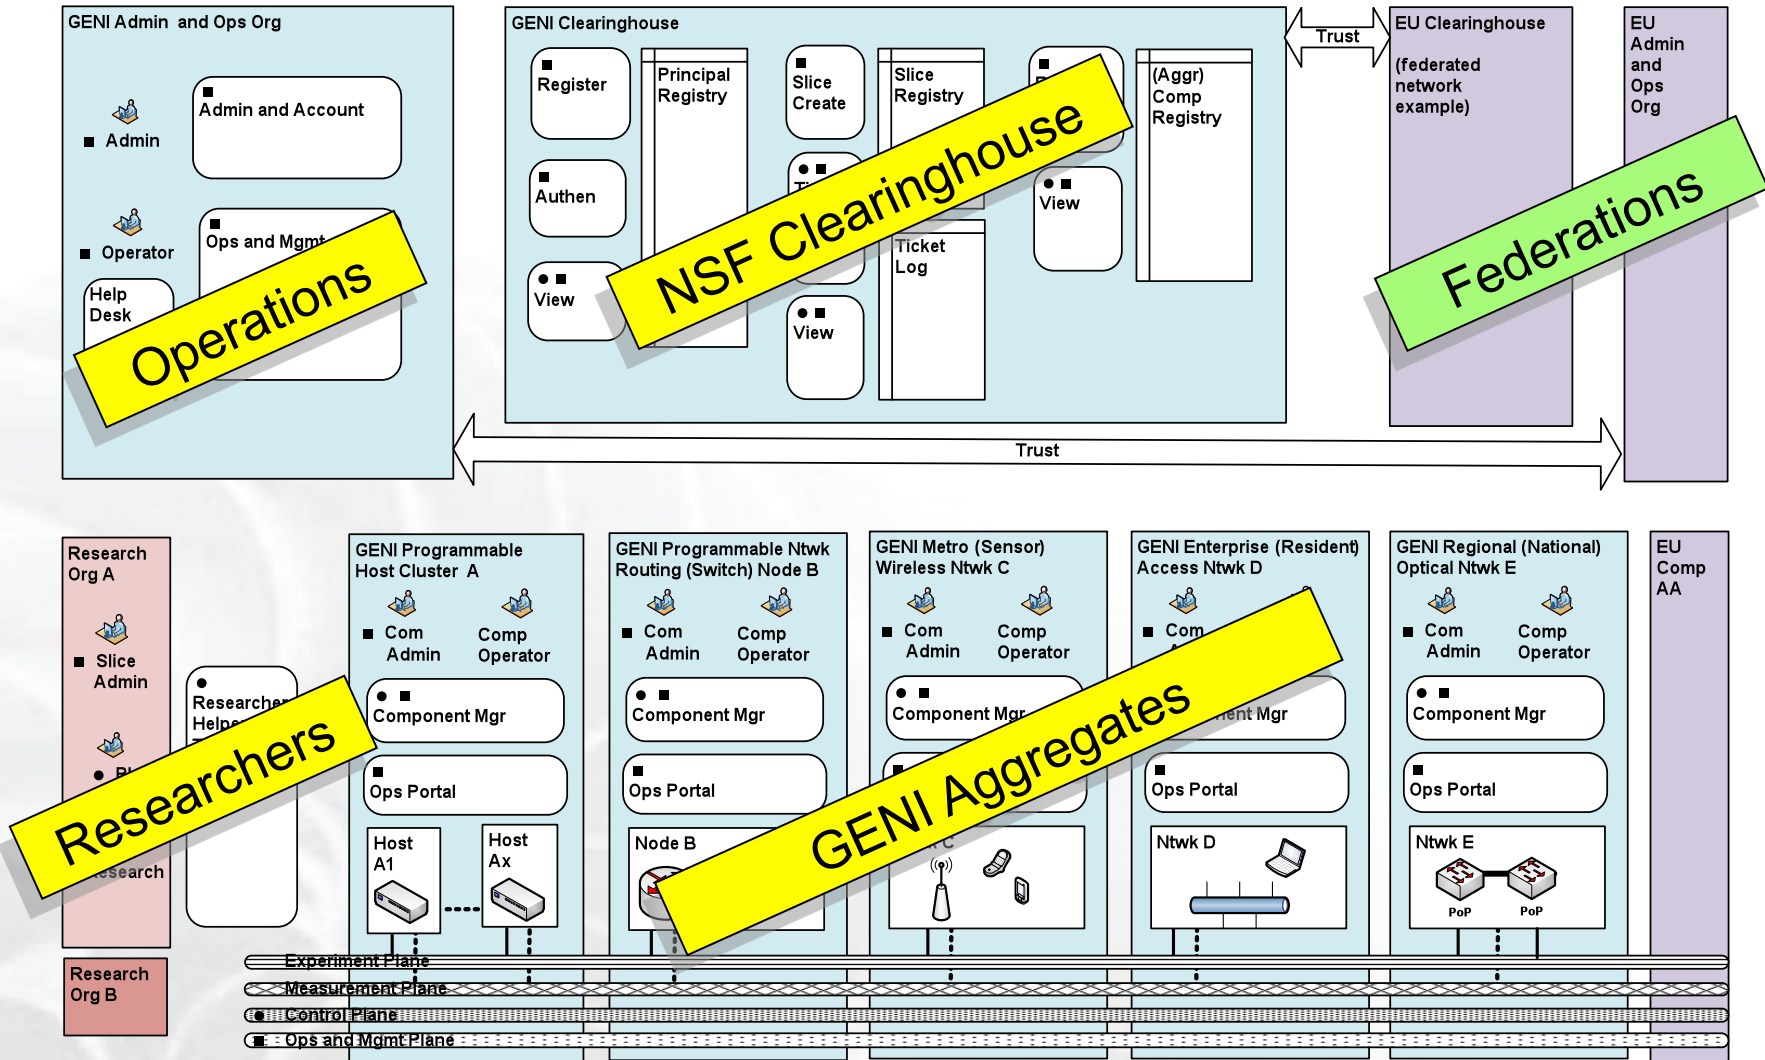

These are exciting times
all around the world!

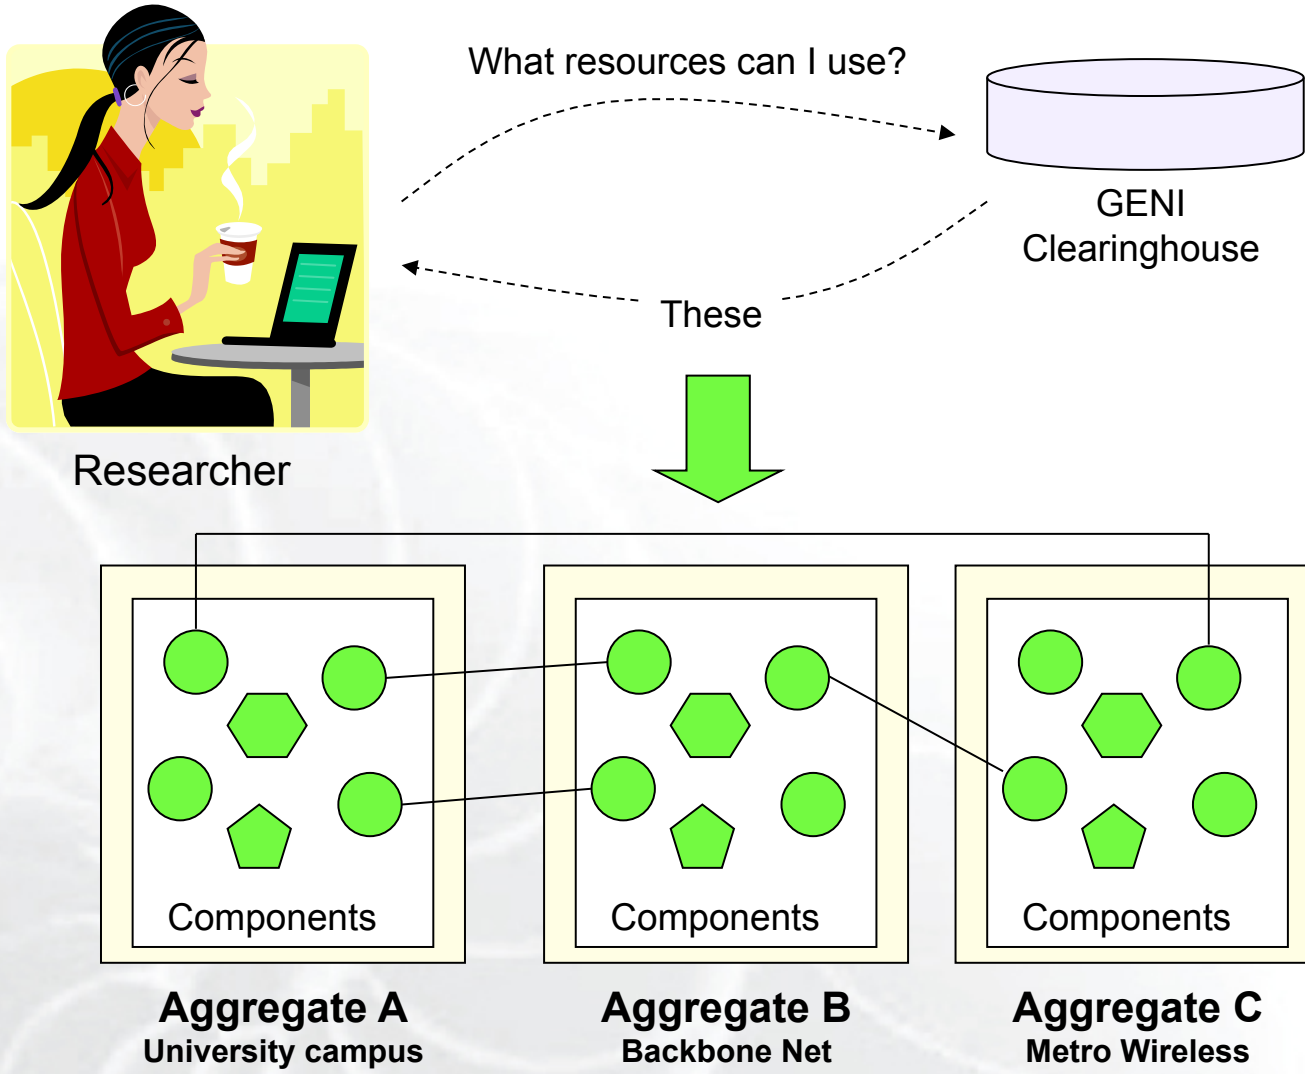

The GENI project is actively collaborating with peer efforts outside the US, based on equality and arising from direct, “researcher to researcher” collaborations.

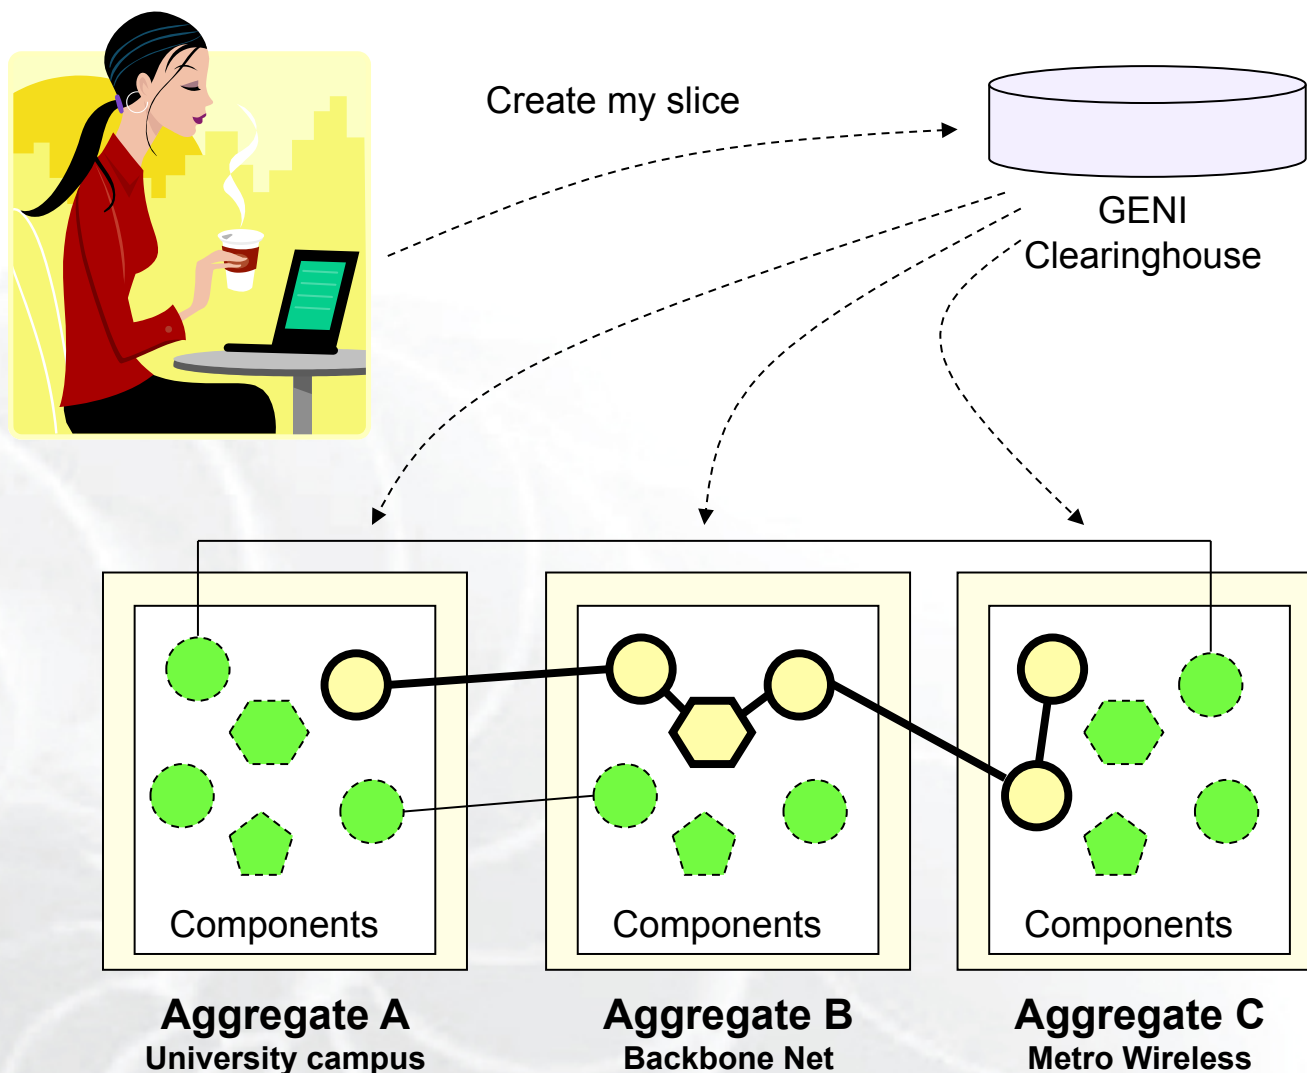

- GENI – Exploring future internets at scale
- Introducing GENI: an example
- GENI's growing suite of infrastructure
- **GENI's evolving control framework**
- How can you participate?

GENI System Diagram (simplified)

Clearinghouse checks credentials & enforces policy
Aggregates allocate resources & create topologies

Researcher loads software, debugs, collects measurements

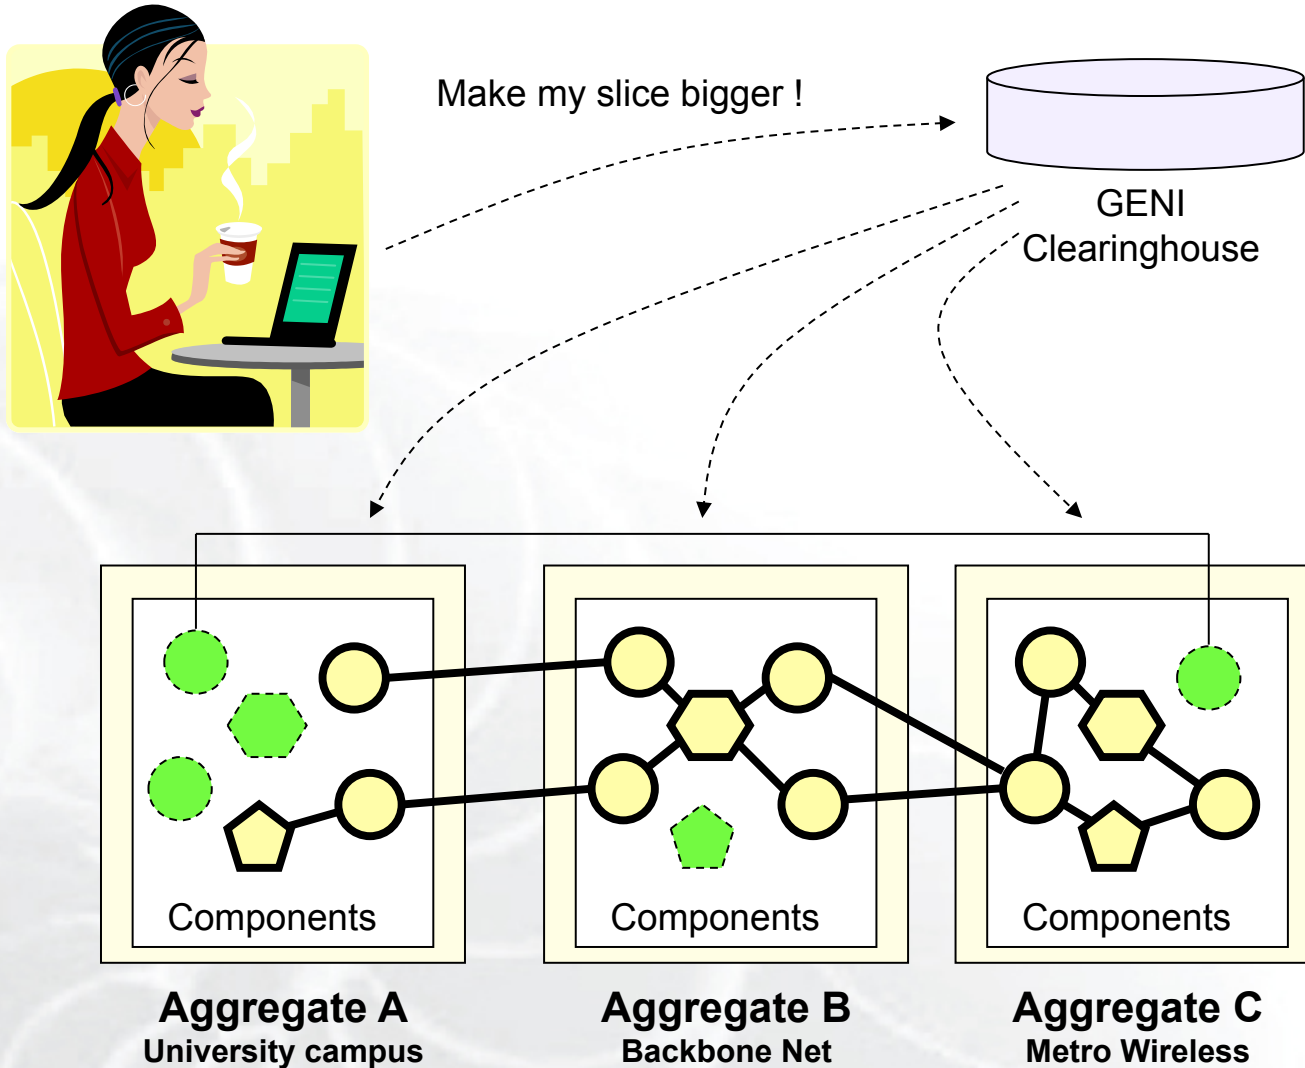

Experiment – Install my software,
debug, collect data, retry, etc.

Slice growth & revision

Allows successful, long-running experiments to grow larger

Federation of Clearinghouses

Growth path to international, semi-private, and commercial GENIs

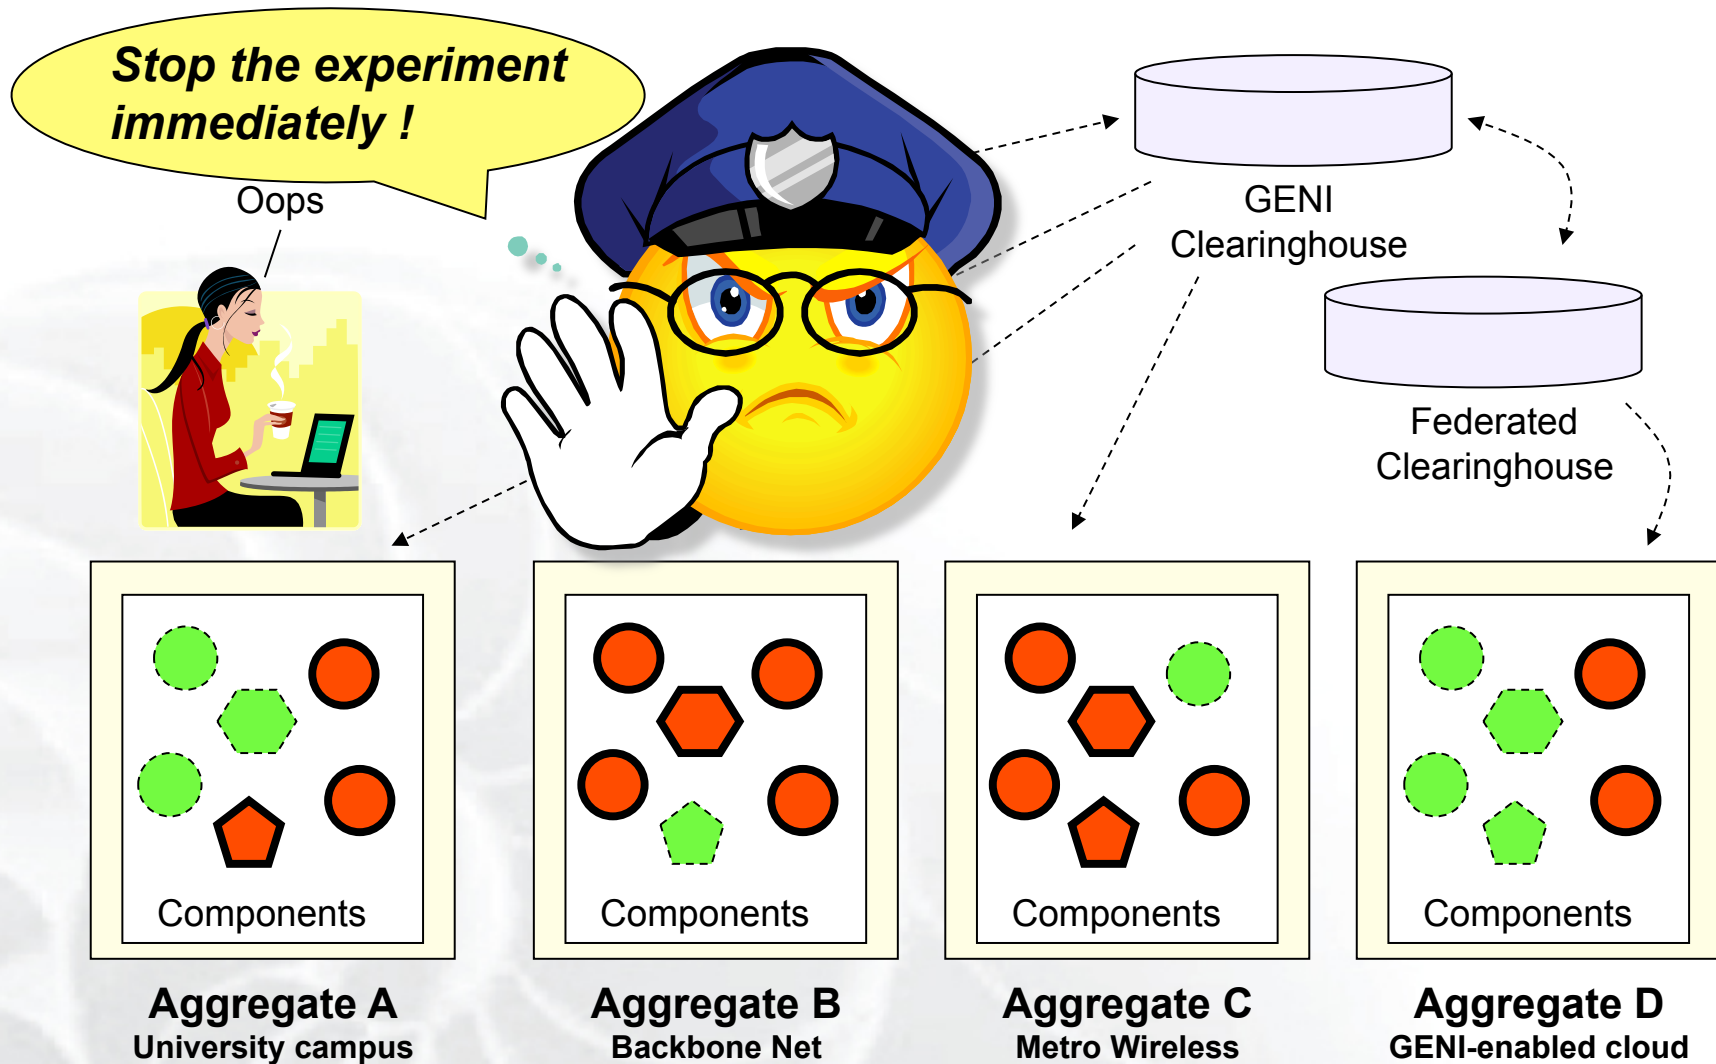

Make my slice even bigger !

Operations & Management

Always present in background for usual reasons
Will need an 'emergency shutdown' mechanism

Spiral 2 Control Framework Teams

A researcher's view of GENI

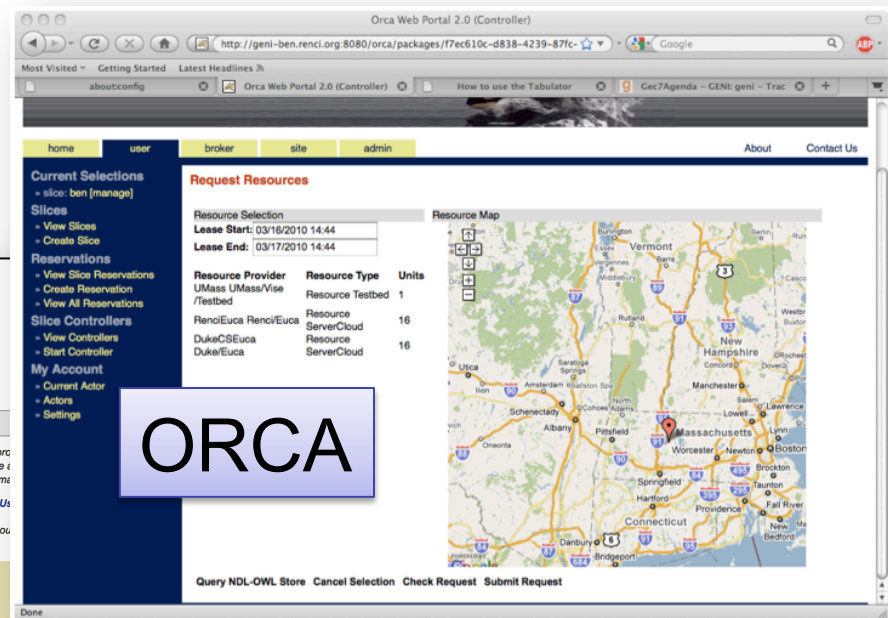

Some familiar tools, plus some new tools

Gush

PlanetLab

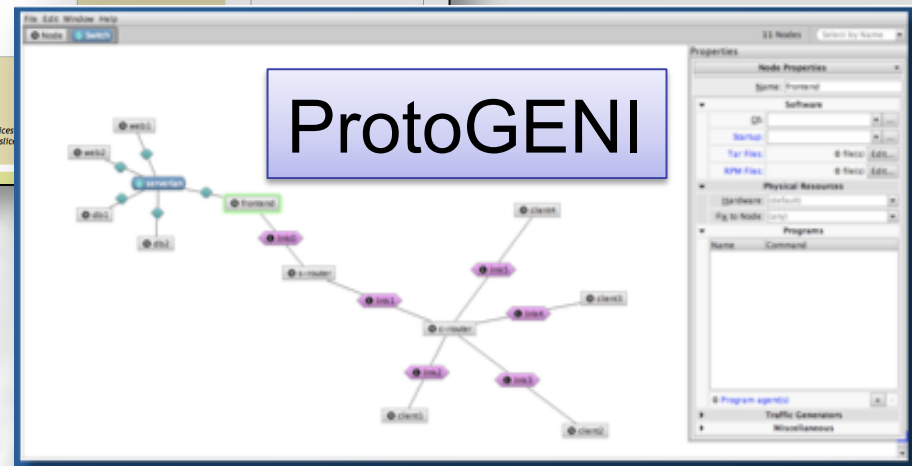

ORCA

Resource Provider	Resource Type	Units
UMass UMass/Vis	Resource Testbed	1
RenciEuca RenciEuca	Resource ServerCloud	16
DukeCSEuca	Resource ServerCloud	16
DukeEuca	Resource ServerCloud	16

OnTimeMeasure

ProtoGENI

Control framework interoperability via the GENI Aggregate Manager API 1.0

Spiral 1: tightly coupled

Control frameworks / Clearinghouses

Aggregates

Each aggregate was tightly linked to exactly one cluster and control framework

Now: open & interoperable

Control frameworks / Clearinghouses

Aggregates

“GENI AM API” lets you mix and match aggregates with control frameworks

PlanetLab, ProtoGENI, OpenFlow are now interoperable – more to follow

- As experiments ramp up . . .
 - Operations need to begin (on a limited scale)
- Experimenters will drive GENI Spiral 3
 - Easy-to-use experiment design tools
 - Measurement, archival, and analysis tools
 - Help desks, training courses, online materials

- GENI – Exploring future internets at scale
- Introducing GENI: an example
- GENI's growing suite of infrastructure
- GENI's evolving control framework
- How can you participate?

Want to run an experiment?

- **Shakedown experiments in progress**
 - “The brave pioneers”
- **GENI Experimenters Workshop - Princeton, June 29-30, 2010**
 - Co-chaired by Jennifer Rexford and Guru Parulkar
 - 54 researchers participated (pairs of prof + student)
 - Dozens of quick-turn proposals submitted to NSF
 - Excellent experimental research starts ramping up in early fall
- **CISE “Future Internet Architectures” program**
 - “stimulate innovative and creative research to explore, design, and evaluate trustworthy future Internet architectures”
 - “design and experiment with new network architectures and networking concepts”
 - “proposals must describe plans to prototype and evaluate the proposed architectures; this may require the construction of new artifacts or the use of research infrastructure like GENI or the NCR (National Cyber Range)”

Talk to NSF CISE or Mark Berman, GPO (mberman@bbn.com)

- **Researcher-led, “hands on” sessions**
 - **Nick Feamster**, Bringing Internet Connectivity to Your GENI Experiment
 - **Rob Ricci**, ProtoGENI tutorial
 - **Timothy Ficarra**, Network Experimentation with UMLPEN
 - **Jon Turner**, Experimental Networks Using the Supercharged PlanetLab Platform
 - **Martin Swany**, GENI Instrumentation and Measurement Systems
 - **Srini Seetharaman**, OpenFlow tutorial
 - **Giovanni Pau**, Designing a Vehicular Network Testbed
 - **Tom Henderson**: ns-3 Tutorial

Want to give a tutorial? What are we missing?

Want to affiliate your infrastructure?

- If so, you will become a new GENI “aggregate”
 - You own / operate your aggregate, and “affiliate” into GENI
 - You make (some of) your resources available for experiments
 - Examples: testbeds, campuses, regionals and backbone networks, commercial providers, . . .
- Three actions needed on your part
 - Download GENI API software, modify to reflect your infrastructure resources and local policies
 - Connect to GENI, ideally at Layer 2 but otherwise via GRE tunnel
 - Agree to GENI policies, sign MOUs, join GENI operations
- Reminder: GENI is still a really early prototype!

If interested, contact Heidi Dempsey (hdempsey@bbn.com)

Want to help design GENI?

- All design, prototyping, & development is performed by the research community (academia & industry)
 - Working Groups, open to all
 - The locus for all GENI technical design
 - Patterned on the early IETF
 - Discuss by email, create documents, meet 3x per year
 - Each led by Chair(s), plus a professional System Engineer
- Openness is emphasized
 - Design process is open, transparent, and broadly inclusive
 - Open-source solutions are strongly preferred
 - Intellectual property is OK, under no-fee license for GENI use
- GPO is fair and even-handed

- GENI racks and “distributed cloud” technology
- Instrumentation and measurement architecture
- Resource specifications (rspecs)
- Mechanisms and policy for user opt-in
- End-to-end stitching mechanisms
- How should operations work?

GENI Engineering Conferences

Meet every 4 months to review progress together

- **10th meeting, open to all:
March 1-3, 2011, Puerto Rico**
 - Team meetings, integrated demos, Working Group meetings
 - Tutorials and workshops
 - **Travel grants** to US academics for participant diversity

GENI is a huge opportunity - Get involved!
