Pervasive Technology Institute

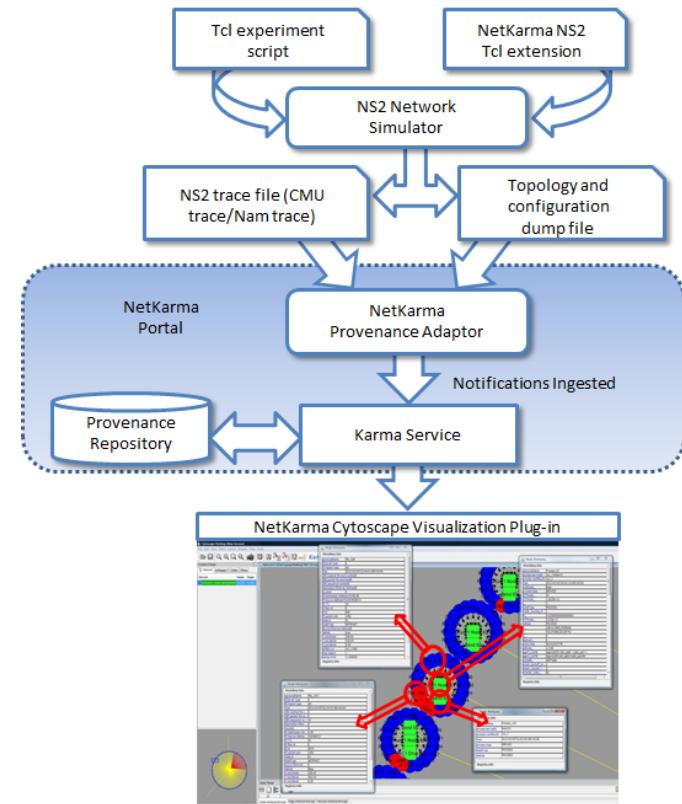

Why provenance?

- Provenance capture has an experiment focus: what got run, by whom, when, where?
- Graph representation of provenance ties inputs and outputs, making reasoning over behavior easier.
- Augments network monitoring data with experiment-relevant information.

NetKarma ORBIT Provenance Visualization Tool

- Captures provenance of GENI experiments on ORBIT
- Visualizes processes and flow of data – using desktop visualization tool
- Annotates visualization with experiment parameters

ORBIT Experiment Descriptor (Ruby script)

Responses from OMF service “info” and “listClients”

Measurement in OML Database

NetKarma Provenance Adaptor

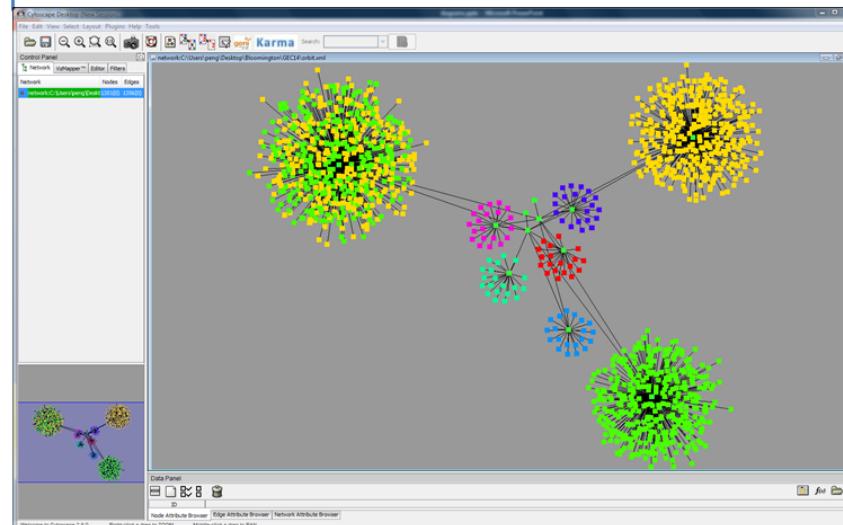

Notifications Ingested

Provenance Repository

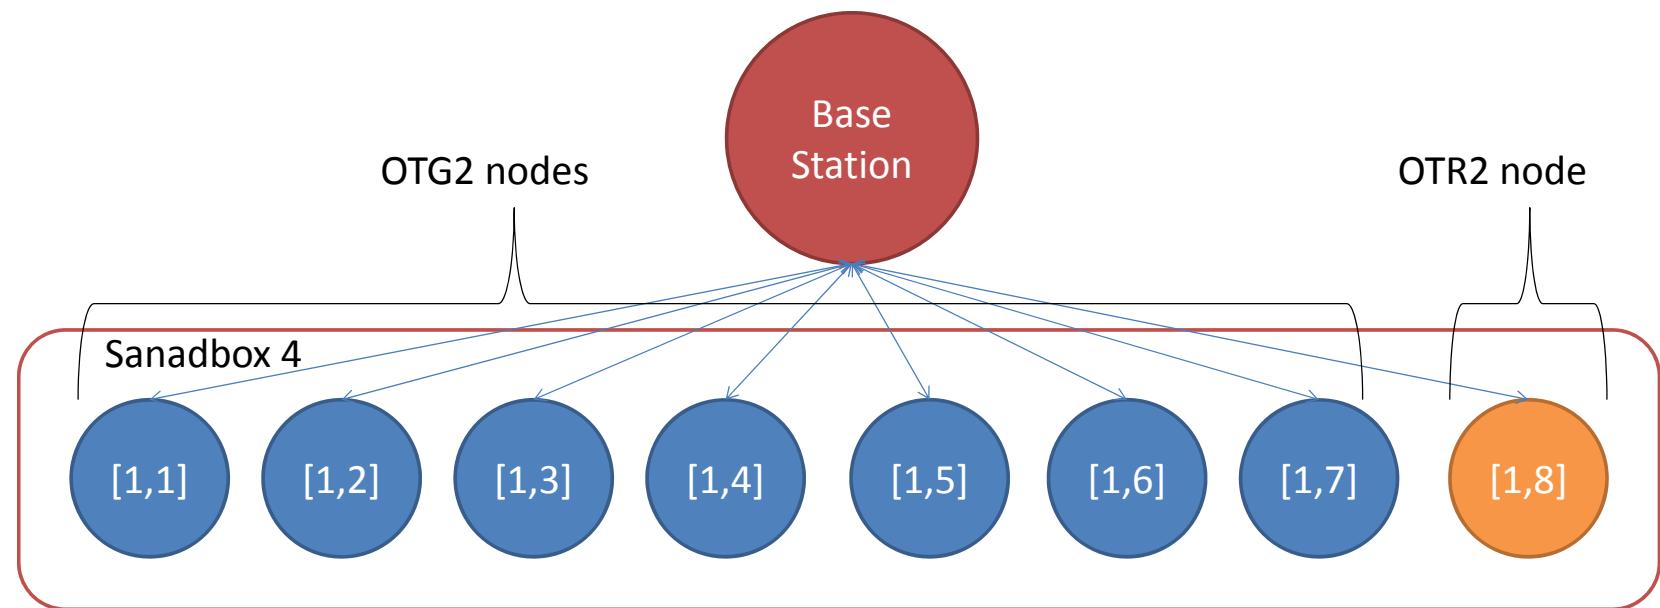

Karma Service

Provenance

NetKarma Cytoscape Visualization Plugin

The Experiment: Many-to-One Communication

Example Based on the OML Traffic Generator (OTG) Tutorial Case

Varies Parameters:
Rate (cbr:rate)
Size (cbr:size)

NetKarma Visualization

- Karma Server available in SourceForge
 - <https://sourceforge.net/projects/karmatool/>
- Color-coded ORBIT Adaptor available from Karma project in SourceForge
- Full documentation available
