

# Shakedown Experimentations and Prototype Services on Scalable, Agile, Robust, and Secure Multi-Domain Software Defined Networks

Lei Liu, Xiaotao Feng, Roberto Proietti, Matt Bishop, Chen-Nee Chuah, S.J. Ben Yoo (PI)

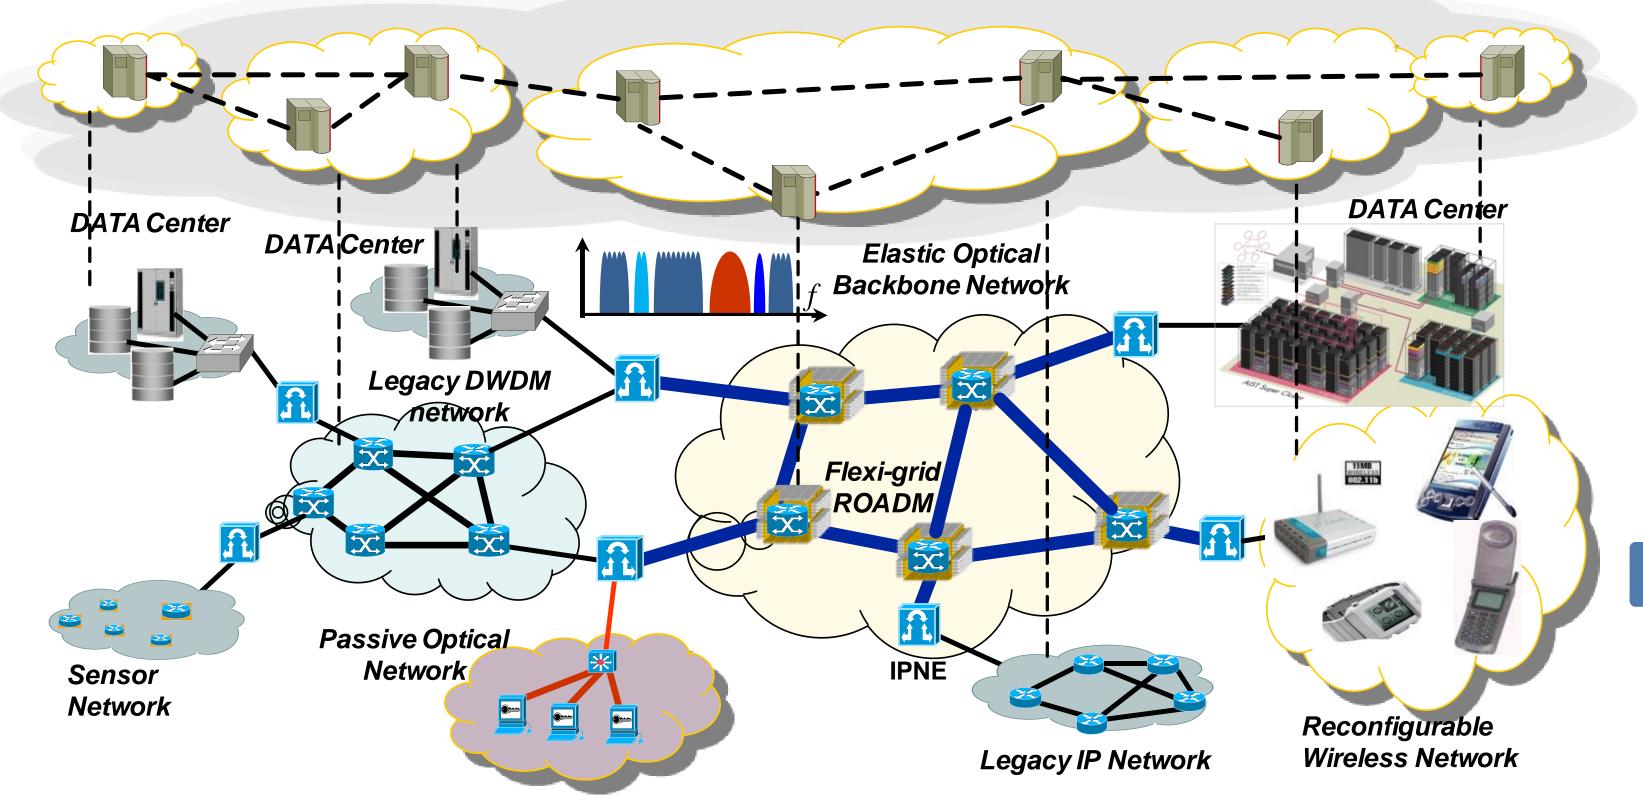

Department of Electrical and Computer Engineering, University of California, Davis, California, 95616

#### **Abstract**

This project pursues design, operation, and experimentations on multi-domain software-defined-networks. We demonstrate three demos, including application-aware big data demo, WiFi handover demo, and multi-domain UCD-COTN-ESNet demo.

#### **Project Objectives**

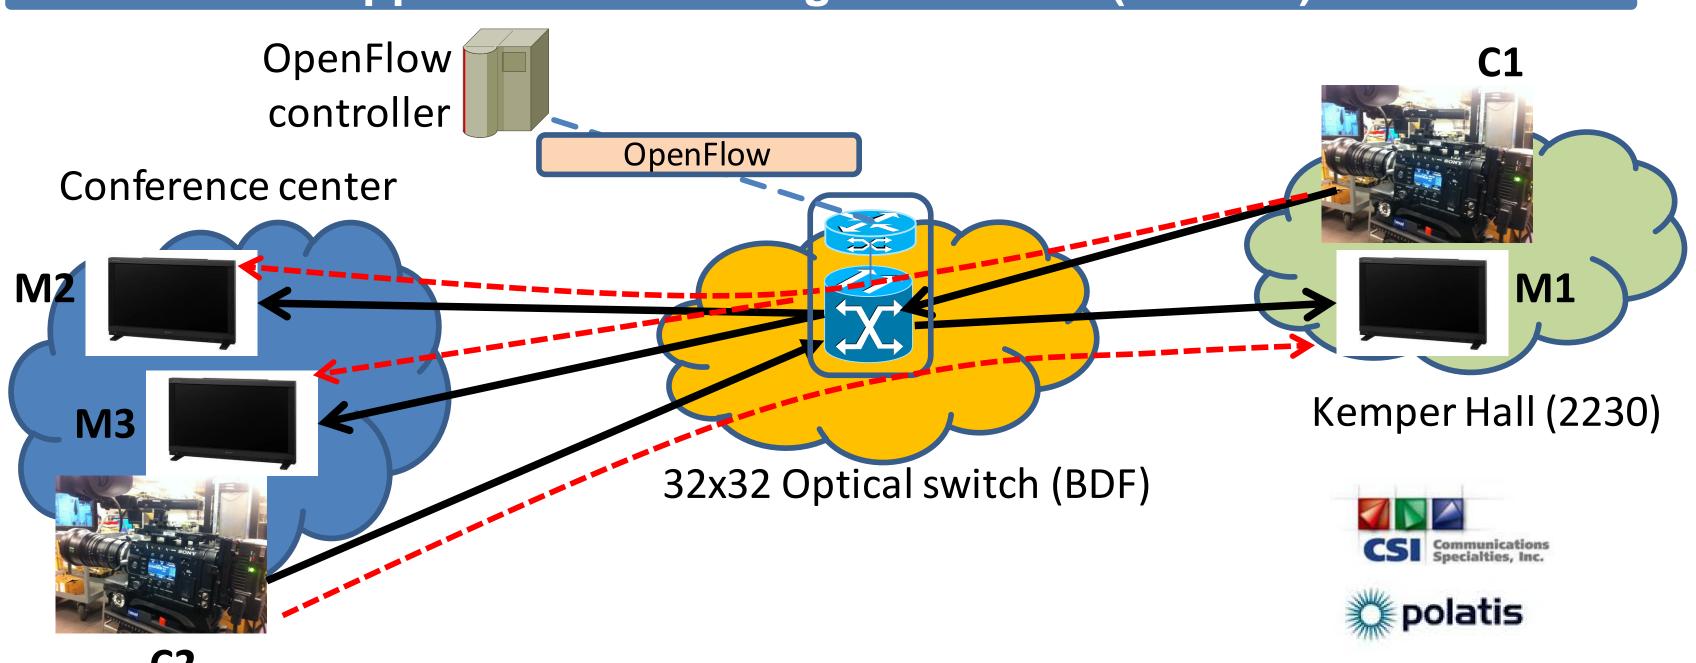

Cloud of Software Defined Network Control & Management Systems in multiple administrative domains

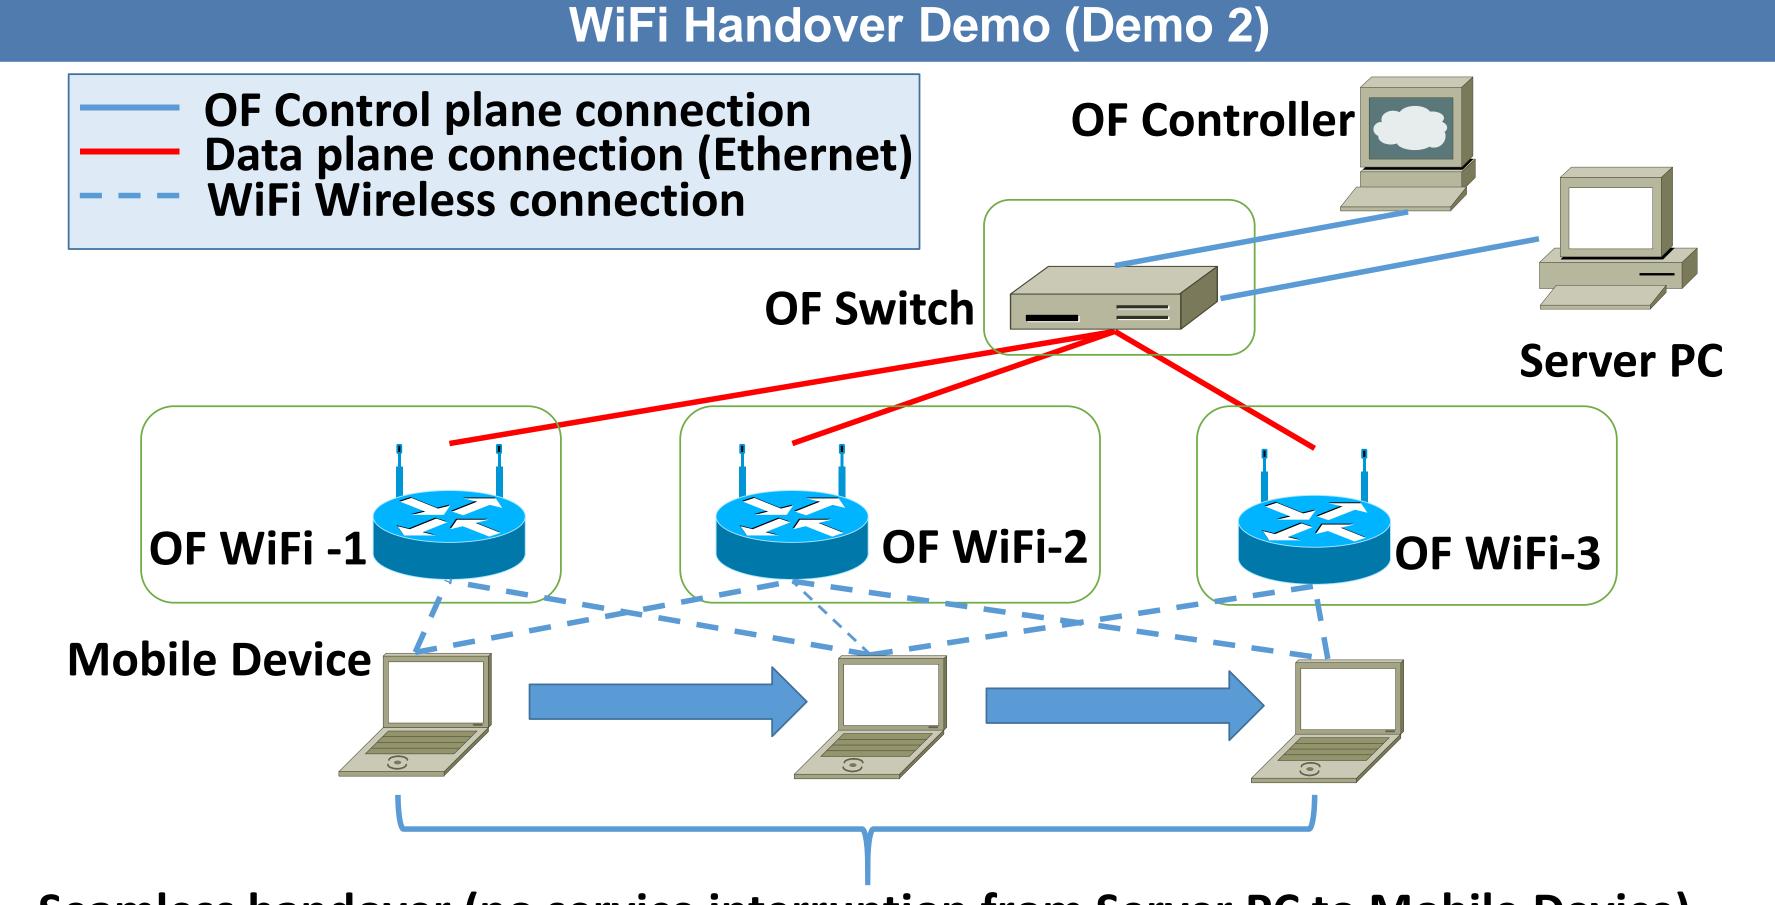

### Multi-domain software-defined heterogeneous networking

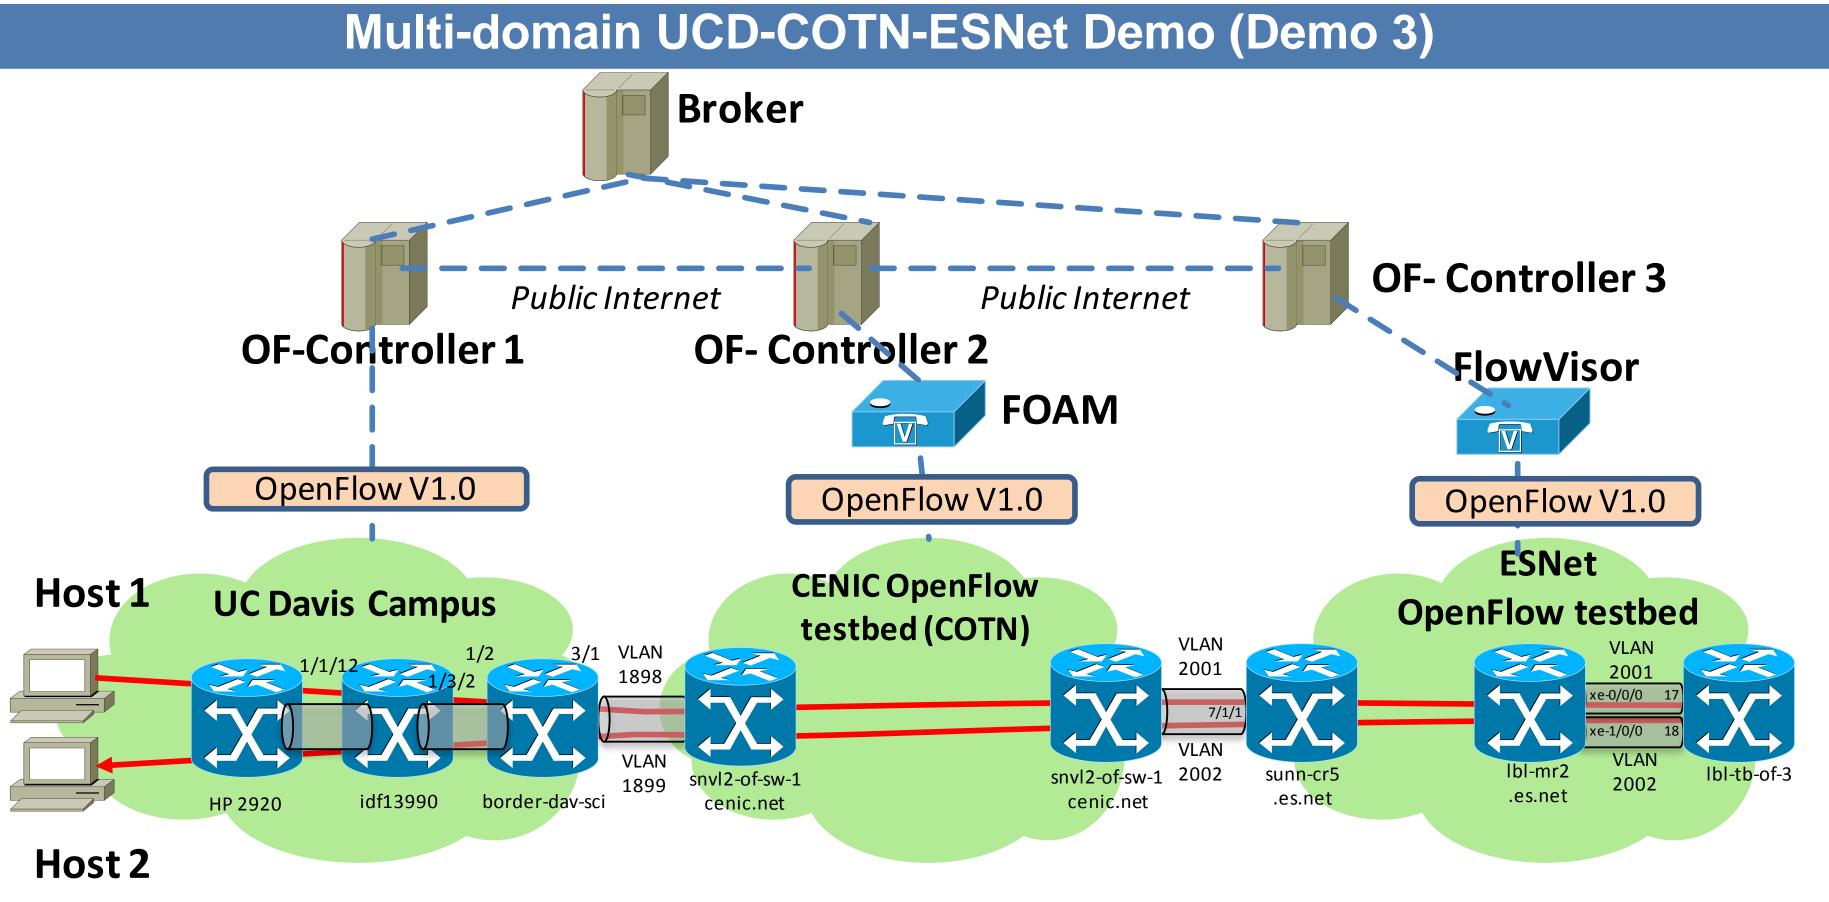

• Conduct a number of key experiments testing a new cross-layer and multi-domain OpenFlow control and management mechanism across multiple GENI testbeds while paying special attentions to configurability, security, and monitoring

## **Application-aware Big Data Demo (Demo 1)**

Seamless handover (no service interruption from Server PC to Mobile Device)

### Acknowledgements

We would like to thank our colleagues and collaborators including UCD Campus IET, CENIC, ESNet, UESTC, USTC, Zhejiang Univ, Polatis and Communications Specialties, Inc. for their great help for the demos
